RA      Signaes C., Raucel G., Joensson K., Lindgren P.-E.,
      Anantharamiah G.M., Hoesok M., Lindberg M.;
      "Nucleotide sequence of the gene for a fibronectin-binding protein
      from Staphylococcus aureus: use of this peptide sequence in the
      synthesis of biologically active peptides.";
      Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
RT      -!- FUNCTION: The ability of bacteria to bind fibronectin has been
      proposed as a virulence factor enabling bacteria to colonize wound
      tissues and blood clots. Binding of plasma fibronectin to the
      bacterial surface might block adhesion receptors on S.aureus, thus
      representing an important defense mechanism against tissue
      invasion.
      -!- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
      an amide bond (Potential).

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65670-90 represent a series of
 CC synthetic peptides based on the D3 repeat of *S. aureus* fibronectin
 CC binding protein A. They were synthesised to contain a proline residue at
 CC each position through the sequence (ie a proline scan)

 PT Antibody that binds to fibronectin-binding protein, preventing its
 PT binding to fibronectin - used to treat or prevent bacterial infection,
 PT especially by Staphylococci and Streptococci.
 PS
 PS Example 2; Page 92; 201pp; English.

XX The invention relates to antibodies that bind to a fibronectin-binding
 CC domain of a fibronectin-binding protein, and inhibit binding of the
 CC protein to fibronectin. Also claimed are: (1) isolated peptides of a
 CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
 CC protein containing at least one peptide of a fibronectin-binding protein
 CC linked to a second amino acid sequence; (3) nucleic acid encoding the
 CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
 CC nucleic acids are all useful for immunisation (active or passive) and (by
 CC inhibiting binding of bacteria to fibronectin) for preventing or treating
 CC infection in humans or other animals, particularly by staphylococci or
 CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65659-68 represent synthetic

CC epitopes from the fibronectin binding domains DU and D1-D4 of the S.

 XX
 PT New fibronectin binding peptide - combines with fusion peptide to form
 PT large antigen, used in immunisation, diagnosis and for treating wounds.
 PS
 PS Claim 1; Page 22; 33pp; English.

XX The sequence comprises amino acids 17-33 of a tandem repeat, designated
 CC D3 of the fibronectin binding site of Staphylococcus aureus 8325-4 FbBP.
 CC The N-terminal DK may be replaced with H or K, and the C-terminal LKP may
 CC be replaced by either L, IP, or OH. The peptides were synthesised using
 CC standard methods and purified using reverse phase HPLC. The appropriate
 CC fractions were dialysed and lyophilised. Peptide sequencing was performed
 CC and the peptides digested and chemically modified by dihydroxypropylation
 CC of the amino side chain of lysine. The carboxylic side chains were
 CC converted to glycine methyl esters. The phenyl side chains of tyrosine
 CC residues were oxidised. Chemically modified peptide D3 was compared to
 CC unmodified D3. Lysine and tyrosine modifications only partially
 CC diminished its activity whereas modification of aspartic/glutamic
 CC residues resulted in complete loss of activity. The peptide can be used
 CC for the prevention or reduction of the risk of wound infection. The
 CC peptide can be used to create a large antigen for vaccinating ruminants
 CC against mastitis caused by Staphylococcal infections. It can also be used
 CC to diagnose Staphylococcal infections using ELISA or DNA probes. (Updated
 CC on 25-MAR-2003 to correct PA field.)

XX  New bovine herpes virus-2 vectors.
PT
XX  Example 2; Fig 8A-B; 130pp; English.
PS
XX  The invention provides bovine herpes virus-2 (BHV-2) based vectors that
CC  comprise at least one cytokine-encoding DNA sequence. The expression of
CC  cytokines in mammals can up-regulate immune responses to the immunogens.
CC  The cytokine is selected from interleukins (IL), colony stimulating
CC  factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The
CC  BHV-2 based vector or recombinant virus can be used as vaccines. They can
CC  be used for preventing or treating a mucosal disease in a subject, e.g.
CC  ruminants, cattle, sheep, goats, dogs, cats, horses, or man, particularly
CC  mastitis in cows or breast cancers in humans. They can also be used for
CC  preventing or treating a stress-induced disease. The present sequence
CC  represents the binding domain of a previously published S. aureus
CC  fibronectin binding protein A (FnBA) sequence. The FnB binding domain
CC  gene sequence FnBAB, cloned for use in this invention has 97.8 percent
CC  identity when compared to the previously published FnBA and FnBB gene
CC  sequences

PS
XX
XX  This protein comprises Staphylococcus aureus fibronectin-binding
CC  microbial surface component recognising adhesive matrix molecule (MSCRAMM)
CC  derivative POD, plus a vector-derived N-terminal peptide. The invention
CC  relates to claimed nucleic acid sequences (see AAT93436-38) encoding S.
CC  aureus collagen binding protein (CBP) epitopes M17, M31 and M55 (see
CC  AAW31552-54) that confer protection against S. aureus infection. CBP
CC  protein and antigenic epitopes are contemplated for use in the treatment
CC  of pathological infections, especially to prevent bacterial adhesion to
CC  collagen. The epitopes are also contemplated for use in the preparation
CC  of vaccines and as carrier proteins in vaccine formulations, as well as
CC  in the formulation of compositions for the prevention of S. aureus
CC  infection. PCR33 and POD (see AAW31556) were used to raise anti-MSCRAMM
CC  polyclonal antibodies used in passive immunisation against bovine
CC  mastitis. (Updated on 25-MAR-2003 to correct PI field.) (Updated on 27-

XX The invention relates to a novel method for identifying, isolating and
XX producing hyperimmune serum-reactive antigens from a pathogen, tumour,
XX allergen, a tissue or host prone to auto-immunity, where the antigens are
XX used in a vaccine, comprises providing antibody preparation from a plasma
XX pool of a type of animal, or individual sera with antibodies against the
XX specific pathogen, tumour, allergen, tissue or host prone to auto-
XX immunity. The hyperimmune serum-reactive antigens comprising any of the

CC 62 sequences of 53-2261 amino acids fully defined in the specification,
CC or their hyperimmune fragments are useful for the manufacture of a
CC pharmaceutical preparation, particularly a vaccine against staphylococcal
CC infections or colonisation against *S. aureus* or *S. epidermidis*. The
CC preparation of antibodies is useful for the manufacture of a medicament
CC for treating or preventing staphylococcal infections or colonisation
CC against *S. aureus* or *S. epidermidis*. The antibody preparations may also
CC be used for diagnostic and imaging purposes. Other conditions that can be
CC treated include cancer, autoimmune diseases or infections caused by viral
CC (e.g. HIV, hepatitis A, B or C), fungal or protozoan pathogens. This
CC sequence represents a staphylococcal protein relating to the method for
CC identifying and producing pathogen specific antigens of the invention

PT Polynucleotide(s) and proteins derived from Staphylococcus aureus -
 PT stored on computer readable medium and used in the production of anti-
 PT S. aureus vaccines.

PS Claim 23; Page 3263-3267; 3271pp; English.

XX This sequence represents a Staphylococcus aureus protein sequence of the
 CC invention. The DNA sequences encoding the S. aureus proteins are recorded
 CC on a computer readable medium, preferably selected from a floppy or hard
 CC disk, random access memory (RAM), read-only memory (ROM) or CD-ROM.
 CC Homology searches using the S. aureus DNA sequences allows putative
 CC functions to be assigned so that protein-encoding or regulatory regions
 CC of commercial, therapeutic or industrial importance can be obtained.
 CC Specifically, sequences which are likely to encode antigens have been
 CC identified and these polypeptides can be used in a vaccine composition
 CC against S. aureus infection. The polypeptides can also be used in a kit
 CC for the immunodetection of S. aureus in a sample. S. aureus is implicated
 CC in numerous human diseases, including cellulitis, eyelid infections, food
 CC poisoning, osteomyelitis, skin and surgical wound infections, scalded
 CC skin syndrome, toxic shock syndrome, etc. Organisms transformed with the
 CC DNA sequences can be used for recombinant production of the polypeptides.
 CC The new DNA sequences (and their fragments) are useful as primers or
 CC probes for isolating homologues of any of the 5191 S. aureus DNA sequences
 CC contained on the computer readable medium

PT New antisense nucleic acid, useful for identifying proteins or screening
 PT for homologous nucleic acids required for cellular proliferation to
 PT isolate candidate molecules for rational drug discovery programs.

PS Claim 25; SEQ ID NO 43778; 1766pp; English.

XX The invention relates to an isolated nucleic acid comprising any one of
 CC the 623 antisense sequences given in the specification where expression
 CC of the nucleic acid inhibits proliferation of a cell. Also included are:
 CC (1) a vector comprising a promoter operably linked to the nucleic acid
 CC encoding a polypeptide whose expression is inhibited by the antisense
 CC nucleic acid; (2) a host cell containing the vector; (3) an isolated
 CC polypeptide or its fragment whose expression is inhibited by the
 CC antisense nucleic acid; (4) an antibody capable of specifically binding
 CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular
 CC proliferation or the activity of a gene in an operon required for
 CC proliferation; (7) identifying a compound that influences the activity of
 CC the gene product or that has an activity against a biological pathway
 CC required for proliferation, or that inhibits cellular proliferation; (8)
 CC identifying a gene required for cellular proliferation or the biological
 CC pathway in which a proliferation-regulated gene or its gene product lies
 CC or a gene on which the test compound that inhibits proliferation of an
 CC organism acts; (9) manufacturing an antibiotic; (10) profiling a
 CC compound's activity; (11) a culture comprising strains in which the gene
 CC product is overexpressed or underexpressed; (12) determining the extent
 CC to which each of the strains is present in a culture or collection of
 CC strains; or (13) identifying the target of a compound that inhibits the
 CC proliferation of an organism. The antisense nucleic acids are useful for
 CC identifying proteins or screening for homologous nucleic acids required
 CC for cellular proliferation to isolate candidate molecules for rational
 CC drug discovery programs, or for screening homologous nucleic acids
 CC required for proliferation in cells other than S. aureus, S. typhimurium,
 CC K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of
 CC the target prokaryotic essential genes. Note: The sequence data for this
 CC patent did not form part of the printed specification, but was obtained
 CC in electronic format directly from WIPO at

XX
PT New polynucleotides for the identification and development of
PT antibiotics, comprise sequences of antisense nucleic acids.
XX
PS Example 3; SEQ ID NO 5456; 511p; English.
XX
CC The invention relates to antisense inhibitors of genes essential to
CC prokaryotic cellular proliferation, their use in identifying the genes,
CC their use in the discovery of novel antibiotics, the essential genes
CC themselves and the encoded proteins. The prokaryotes used are Escherichia
CC coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae,
CC Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also
CC useful for the identification of potential new targets for antibiotic
CC development. The antisense nucleic acids can also be used to identify
CC proteins used in proliferation, to express these proteins, and to obtain
CC antibodies capable of binding to the expressed proteins. The proteins can
CC be used to screen compounds in rational drug discovery programmes. The
CC antisense nucleic acid sequence is also useful to screen for homologous
CC nucleic acids which are required for cell proliferation in a wide variety
CC of organisms. The present sequence represents an essential prokaryotic
CC cellular proliferation protein. Note: The sequence data for this patent
CC did not form part of the printed specification, but was obtained in
CC electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

  Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
RT
RL
CC -I- FUNCTION: The ability of bacteria to bind fibronectin has been
  proposed as a virulence factor enabling bacteria to colonize wound
  tissues and blood clots. Binding of plasma fibronectin to the
  bacterial surface might block adhesion receptors on S.aureus, thus
  representing an important defense mechanism against tissue
  invasion.
CC -I- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
  an amide bond (Potential).

 CC -1- FUNCTION: Involved in the regulation of cell growth. May stabilize
 the active CDC2-cyclin B1 complex and thereby contribute to the
 regulation of the cell cycle and the prevention of uncontrolled
 cell proliferation. May act as tumor suppressor (By similarity).
 CC -1- SUBUNIT: Binds E2F1 and CDC2 (By similarity).
 CC -1- SUBCELLULAR LOCATION: Cytoplasmic; associated with the plasma
 membrane and with microtubules. Detected in dendritic spines,
 especially in the postsynaptic density (By similarity).
 CC -1- PTM: Phosphorylated on serine residues. Hyperphosphorylated by the
 CAMP-dependent kinase PKA during cell-cycle progression (By
 similarity).
 CC -1- SIMILARITY: Belongs to the LZTS family.

XX Antibody that binds to fibronectin-binding protein, preventing its
 PT binding to fibronectin - used to treat or prevent bacterial infection,
 PT especially by Staphylococci and Streptococci.

XX Example 2; Page 92; 201pp; English.

XX The invention relates to antibodies that bind to a fibronectin-binding
 CC domain of a fibronectin-binding protein, and inhibit binding of the
 CC protein to fibronectin. Also claimed are: (1) isolated peptides of a
 CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
 CC protein containing at least one peptide of a fibronectin-binding protein
 CC linked to a second amino acid sequence; (3) nucleic acid encoding the
 CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
 CC nucleic acids are all useful for immunisation (active or passive) and (by
 CC inhibiting binding of bacteria to fibronectin) for preventing or treating
 CC infection in humans or other animals, particularly by Staphylococci or
 CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65659-68 represent synthetic

CC epitopes from the fibronectin binding domains DU and D1-D4 of the *S.*
 CC *aureus* fnbA gene

XX Claim 1; Page 22; 33pp; English.

XX The sequence comprises amino acids 17-33 of a tandem repeat, designated
 CC D3 of the fibronectin binding site of *Staphylococcus aureus* 8325-4 FbBP.
 CC The N-terminal DK may be replaced with H or K, and the C-terminal LKP may
 CC be replaced by either L, LP, or OH. The peptides were synthesised using
 CC standard methods and purified using reverse phase HPLC. The appropriate
 CC fractions were dialysed and lyophilised. Peptide sequencing was performed
 CC and the peptides digested and chemically modified by dihydroxypropylation
 CC of the amino side chain of lysine. The carboxylic side chains were
 CC converted to glycine methyl esters. The phenyl side chains of tyrosine
 CC residues were oxidised. Chemically modified peptide D3 was compared to
 CC unmodified D3. Lysine and tyrosine modifications only partially
 CC diminished its activity whereas modification of aspartic/glutamic
 CC residues resulted in complete loss of activity. The peptide can be used
 CC for the prevention or reduction of the risk of wound infection. The
 CC peptide can be used to create a large antigen for vaccinating humans
 CC against mastitis caused by *Staphylococcal* infections. It can also be used
 CC to diagnose *Staphylococcal* infections using ELISA or DNA probes. (Updated
 CC on 25-MAR-2003 to correct PA field.)

 PT Modifying and attaching therapeutic peptides to albumin prevents
 PT peptidase degradation, useful for increasing length of in vivo activity.
 XX
 PS Disclosure; Page 566; 73pp; English.

CC The present invention describes a modified therapeutic peptide (I)
 CC comprising a therapeutically active amino acid region (III) and a
 CC reactive group (II) (e.g. succinimidy) and maleimido groups) attached to
 CC a less therapeutically active amino acid region (IV), which covalently
 CC bonds with amino/hydroxyl/thiol groups on blood components to form a
 CC peptidease stabilised therapeutic peptide composed of 3-50 amino acids.
 CC (I) are useful for modifying therapeutic peptides e.g. hormones, growth
 CC factors and neurotransmitters, to protect them from peptidase activity in
 CC vivo for the treatment of various disorders. Endogenous therapeutic
 CC peptides are not suitable as drug candidates as they require frequent
 CC administration due to rapid degradation by peptidases in the body.
 CC Modifying and attaching therapeutic peptides to albumin prevents or
 CC reduces the action of peptidases to increase length of activity (half
 CC life) and specificity as bonding to large molecules decreases
 CC intracellular uptake and interference with physiological processes.
 CC AAB90829 to AAB92441 represent peptides which can be used in the
 CC exemplification of the present invention

XX  PS  Example 2; Fig 8A-B; 130pp; English.
XX  CC  The invention provides bovine herpes virus-2 (BHV-2) based vectors that
CC  comprise at least one cytokine-encoding DNA sequence. The expression of
CC  cytokines in mammals can up-regulate immune responses to the immunogens.
CC  The cytokine is selected from interleukins (IL), colony stimulating
CC  factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The
CC  BHV-2 based vector or recombinant virus can be used as vaccines. They can
CC  be used for preventing or treating a mucosal disease in a subject, e.g.
CC  ruminants, cattle, sheep, goats, dogs, cats, horses, or man, particularly
CC  mastitis in cows or breast cancers in humans. They can also be used for
CC  preventing or treating a stress-induced disease. The present sequence
CC  represents the binding domain of a previously published S. aureus
CC  fibronectin binding protein A (FnBA) sequence. The FnB binding domain
CC  gene sequence FnBAB, cloned for use in this invention has 97.8 percent
CC  identity when compared to the previously published FnBA and FnBB gene
CC  sequences

XX
XX The invention relates to a novel method for identifying, isolating and
XX producing hyperimmune serum-reactive antigens from a pathogen, tumour,
XX allergen, a tissue or host prone to auto-immunity, where the antigens are
XX used in a vaccine, comprises providing antibody preparation from a plasma
XX pool of a type of animal, or individual sera with antibodies against the
XX specific pathogen, tumour, allergen, tissue or host prone to auto-
XX immunity. The hyperimmune serum-reactive antigens comprising any of the

CC 62 sequences of 53-2261 amino acids fully defined in the specification,
CC or their hyperimmune fragments are useful for the manufacture of a
CC pharmaceutical preparation, particularly a vaccine against staphylococcal
CC infections or colonisation against *S. aureus* or *S. epidermidis*. The
CC preparation of antibodies is useful for the manufacture of a medicament
CC for treating or preventing staphylococcal infections or colonisation
CC against *S. aureus* or *S. epidermidis*. The antibody preparations may also
CC be used for diagnostic and imaging purposes. Other conditions that can be
CC treated include cancer, autoimmune diseases or infections caused by viral
CC (e.g. HIV, hepatitis A, B or C), fungal or protozoan pathogens. This
CC sequence represents a staphylococcal protein relating to the method for
CC identifying and producing pathogen specific antigens of the invention

XX
XX Claim 23; Page 3263-3267; 3271pp; English.

This sequence represents a Staphylococcus aureus protein sequence of the invention. The DNA sequences encoding the S. aureus proteins are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access memory (RAM), read-only memory (ROM) or CD-ROM. Homology searches using the S. aureus DNA sequences allows putative functions to be assigned so that protein-encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are likely to encode antigens have been identified and these polypeptides can be used in a vaccine composition against S. aureus infection. The polypeptides can also be used in a kit for the immunodetection of S. aureus in a sample. S. aureus is implicated in numerous human diseases, including cellulitis, eyelid infections, food poisoning, osteomyelitis, skin and surgical wound infections, scalded skin syndrome, toxic shock syndrome, etc. Organisms transformed with the DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences (and their fragments) are useful as primers or probes for isolating homologues of any of the 5191 S. aureus DNA sequences contained on the computer readable medium

XX New antisense nucleic acid, useful for identifying proteins or screening
PT for homologous nucleic acids required for cellular proliferation to
PT isolate candidate molecules for rational drug discovery programs.
XX
XX Claim 25; SEQ ID NO 43778; 1766pp; English.

The invention relates to an isolated nucleic acid comprising any one of the 623 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway of the cell required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-regulated gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

RA Signae C., Raucel G., Joensen K., Lindgren P.-E.,
RA Antharathanaiah G.M., Hoeck M., Lindberg M.;
RT "Nucleotide sequence of the gene for a fibronectin-binding protein
RT from Staphylococcus aureus: use of this peptide sequence in the
RT synthesis of biologically active peptides."
RT Proc. Natl. Acad. Sci. U.S.A. 86:699-703 (1989).

CC -!- FUNCTION: The ability of bacteria to bind fibronectin has been
CC proposed as a virulence factor enabling bacteria to colonize wound
CC tissues and blood clots. Binding of plasma fibronectin to the
CC bacterial surface might block adhesion receptors on S.aureus, thus
CC representing an important defense mechanism against tissue
CC invasion.

CC -!- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
CC an amide bond (potential).
CC

 -1- FUNCTION: Functions as a component of the nuclear pore complex
 (NPC). NPC components, collectively referred to as nucleoporins
 (NUPs), can play the role of both NPC structural components and of
 docking or interaction partners for transiently associated nuclear
 transport factors. Active directional transport is assured by
 both, a Phe-Gly (FG) repeat affinity gradient for these transport
 factors across the NPC and a transport cofactor concentration
 gradient across the nuclear envelope (GSP1 and GSP2 GTPases
 associated predominantly with GTP in the nucleus, with GDP in the
 cytoplasm). As one of the FG repeat nucleoporins NUP2 is involved
 in interactions with and guidance of nuclear transport receptors
 such as SRP1-KAP95 (importin alpha and beta) through the NPC. Like
 the closely related NUP1 it also plays an important role in
 disassembling and recycling SRP1-KAP95 to the cytoplasm after
 nuclear import. Upon entry of the heterotrimeric SRP1-KAP95-cargo
 complex in the nucleus, NUP2 binds through its N-terminus to the
 SRP1 nuclear localization signal (NLS) binding site, thus
 accelerating the release of the NLS-cargo. SRP1 in turn is
 released from NUP2 by binding of the NLS-GTP associated export
 factor CSE1. NUP2 may also have a chromatin boundary/insulator
 activity through indirect interaction with genomic DNA via CSE1
 and blocking of heterochromatin spreading.
 -1- SUBUNIT: The nuclear pore complex (NPC) constitutes the exclusive

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65670-90 represent a series of
 CC synthetic peptides based on the D3 repeat of *S. aureus* fibronectin
 CC binding protein A. They were synthesised to contain a proline residue at
 CC each position through the sequence (ie a proline scan)

 PT Antibody that binds to fibronectin-binding protein, preventing its
 PT binding to fibronectin - used to treat or prevent bacterial infection,
 PT especially by Staphylococci and Streptococci.
 XX
 PS Example 2; Page 92; 201pp; English.

XX The invention relates to antibodies that bind to a fibronectin-binding
 CC domain of a fibronectin-binding protein, and inhibit binding of the
 CC protein to fibronectin. Also claimed are: (1) isolated peptides of a
 CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
 CC protein containing at least one peptide of a fibronectin-binding protein
 CC linked to a second amino acid sequence; (3) nucleic acid encoding the
 CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
 CC nucleic acids are all useful for immunisation (active or passive) and (by
 CC inhibiting binding of bacteria to fibronectin) for preventing or treating
 CC infection in humans or other animals, particularly by staphylococci or
 CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65659-68 represent synthetic

CC epitopes from the fibronectin binding domains DU and D1-D4 of the S.

 PT New fibronectin binding peptide - combines with fusion peptide to form
 PT large antigen, used in immunisation, diagnosis and for treating wounds.
 XX
 PS Claim 1; Page 22; 33pp; English.

XX The sequence comprises amino acids 17-33 of a tandem repeat, designated
 CC D3 of the fibronectin binding site of Staphylococcus aureus 8325-4 FbBP.
 CC The N-terminal DK may be replaced with H or K, and the C-terminal LKP may
 CC be replaced by either L, IP, or OH. The peptides were synthesised using
 CC standard methods and purified using reverse phase HPLC. The appropriate
 CC fractions were dialysed and lyophilised. Peptide sequencing was performed
 CC and the peptides digested and chemically modified by dihydroxypropylation
 CC of the amino side chain of lysine. The carboxylic side chains were
 CC converted to glycine methyl esters. The phenyl side chains of tyrosine
 CC residues were oxidised. Chemically modified peptide D3 was compared to
 CC unmodified D3. Lysine and tyrosine modifications only partially
 CC diminished its activity whereas modification of aspartic/glutamic
 CC residues resulted in reduction of activity. The peptide can be used
 CC for the prevention or reduction of the risk of wound infection. The
 CC peptide can be used to create a large antigen for vaccinating ruminants
 CC against mastitis caused by Staphylococcal infections. It can also be used
 CC to diagnose Staphylococcal infections using ELISA or DNA probes. (Updated
 CC on 25-MAR-2003 to correct PA field.)

PT Modifying and attaching therapeutic peptides to albumin prevents
XX peptidase degradation, useful for increasing length of in vivo activity.

XX Disclosure; Page 566; 733pp; English.

CC The present invention describes a modified therapeutic peptide (I)
CC comprising a therapeutically active amino acid region (III) and a
CC reactive group (II) (e.g. succinimidyl and maleimido groups) attached to
CC a less therapeutically active amino acid region (IV), which covalently
CC bonds with amino/hydroxyl/thiol groups on blood components to form a
CC peptidase stabilised therapeutic peptide composed of 3-50 amino acids.
CC (I) are useful for modifying therapeutic peptides e.g. hormones, growth
CC factors and neurotransmitters, to protect them from peptidase activity in
CC vivo for the treatment of various disorders. Endogenous therapeutic
CC peptides are not suitable as drug candidates as they require frequent
CC administration due to rapid degradation by peptidases in the body.
CC Modifying and attaching therapeutic peptides to albumin prevents or
CC reduces the action of peptidases to increase length of activity (half
CC life) and specificity as bonding to large molecules decreases
CC intracellular uptake and interference with physiological processes.
CC AAB90829 to AAB92441 represent peptides which can be used in the
CC exemplification of the present invention

XX relates to claimed nucleic acid sequences (see AAT93436-38) encoding S.
XX aureus collagen binding protein (CBP) epitopes M17, M31 and M55 (see
XX AAW31552-54) that confer protection against S. aureus infection. CBP
XX protein and antigenic epitopes are contemplated for use in the treatment
XX of pathological infections, especially to prevent bacterial adhesion to
XX collagen. The epitopes are also contemplated for use in the preparation
XX of vaccines and as carrier proteins in vaccine formulations, as well as
XX in the formulation of compositions for the prevention of S. aureus
XX infection. pCF3 and POD (see AAW31556) were used to raise anti-MSCRAMM
XX polyclonal antibodies used in passive immunisation against bovine
XX mastitis. (Updated on 25-MAR-2003 to correct PI field.) (Updated on 27-
XX AUG-2003 to correct OS field.)

 XX Hybrid DNA encoding Staphylococcus aureus fibronectin binding protein -
 PT useful for immunisation and topical application to prevent staphylococcal
 PT infections.
 XX
 XX Disclosure; Fig. 8A:1-8A:2; 23pp; English.
 CC The S. aureus fibronectin binding protein may be included in a hybrid
 CC protein. The protein may be used to immunise ruminants against
 CC staphylococcal mastitis; pref. when given at 0.5-5 microg/kg; using 3
 CC doses at 1-3 week intervals; and for topical applicn. to prevent wound
 CC infection; pref. using isotonic saline soln. of concn. 25-250 microg/mg.
 CC The DNA encoding the binding protein and the hybrid protein may be
 CC immobilised on a carrier and used to diagnose staphylococcal infections.

XX Identifying, isolating and producing hyperimmune serum-reactive antigens
 PT from a pathogen, for preparing vaccine or medicament for treating or
 PT preventing e.g. staphylococcal infections, comprises providing antibody
 PT preparation.

XX Example 7, Page 157; 252pp; English.

XX The invention relates to a novel method for identifying, isolating and
 CC producing hyperimmune serum-reactive antigens from a pathogen, tumour,
 CC allergen, a tissue or host prone to auto-immunity where the antigens are
 CC used in a vaccine, comprises providing antibody preparation from a plasma
 CC pool of a type of animal, or individual sera with antibodies against the
 CC specific pathogen, tumour, allergen, tissue or host prone to auto-
 CC immunity. The hyperimmune serum-reactive antigens comprising any of the

CC 62 sequences of 53-2261 amino acids fully defined in the specification,
 CC or their hyperimmune fragments are useful for the manufacture of a
 CC pharmaceutical preparation, particularly a vaccine against staphylococcal
 CC infections or colonisation against *S. aureus* or *S. epidermidis*. The
 CC preparation of antibodies is useful for the manufacture of a medicament
 CC for treating or preventing staphylococcal infections or colonisation
 CC against *S. aureus* or *S. epidermidis*. The antibody preparations may also
 CC be used for diagnostic and imaging purposes. Other conditions that can be
 CC treated include cancer, autoimmune diseases or infections caused by viral
 CC (e.g. HIV, hepatitis A, B or C), fungal or protozoan pathogens. This
 CC sequence represents a staphylococcal protein relating to the method for
 CC identifying and producing pathogen specific antigens of the invention

 PT preventing *Staphylococcal* infection, specifically an infection caused by
 PT *S. aureus*, e.g. sepsis.

XX Claim 1; SEQ ID NO 3554; 49pp; English.

XX The invention relates to novel genes and encoded proteins from
 CC *Staphylococcus aureus*. A composition comprising the *S. aureus* protein, a
 CC nucleic acid encoding the protein, or an antibody to the protein, is
 CC useful as a pharmaceutical, particularly as a vaccine for treating or
 CC preventing infection due to *Staphylococcus* bacteria, specifically an
 CC infection caused by *S. aureus*. The composition is particularly useful for
 CC treating or preventing sepsis in a patient. The composition can also be
 CC used for diagnostics. The protein is also used in an assay for enzymatic
 CC studies and as a target for antibiotics. This sequence represents one of
 CC the novel *S. aureus* proteins of the invention

XX Polynucleotide(s) and proteins derived from Staphylococcus aureus -
 PT stored on computer readable medium and used in the production of anti-
 PT S.aureus vaccines.

XX Claim 23; Page 3263-3267; 3271pp; English.

XX This sequence represents a Staphylococcus aureus protein sequence of the
 CC invention. The DNA sequences encoding the S.aureus proteins are recorded
 CC on a computer readable medium, preferably selected from a floppy or hard
 CC disk, random access memory (RAM), read-only memory (ROM) or CD-ROM.
 CC Homology searches using the S.aureus DNA sequences allows putative
 CC functions to be assigned so that protein-encoding or regulatory regions
 CC of commercial, therapeutic or industrial importance can be obtained.
 CC Specifically, sequences which are likely to encode antigens have been
 CC identified and these polypeptides can be used in a vaccine composition
 CC against S.aureus infection. The polypeptides can also be used in a kit
 CC for the immunodetection of S.aureus in a sample. S.aureus is implicated
 CC in numerous human diseases, including cellulitis, eyelid infections, food
 CC poisoning, osteomyelitis, skin and surgical wound infections, scalded
 CC skin syndrome, toxic shock syndrome, etc. Organisms transformed with the
 CC DNA sequences can be used for recombinant production of the polypeptides.
 CC The new DNA sequences (and their fragments) are useful as primers or
 CC probes for isolating homologues of any of the 5191 S.aureus DNA sequences
 CC contained on the computer readable medium

XX New antisense nucleic acids, useful for identifying proteins or screening
 PT for homologous nucleic acids required for cellular proliferation to
 PT isolate candidate molecules for rational drug discovery programs.

XX Claim 25; SEQ ID NO 43778; 1766pp; English.

XX The invention relates to an isolated nucleic acid comprising any one of
 CC the 623 antisense sequences given in the specification where expression
 CC of the nucleic acid inhibits proliferation of a cell. Also included are:
 CC (1) a vector comprising a promoter operably linked to the nucleic acid
 CC encoding a polypeptide whose expression is inhibited by the antisense
 CC nucleic acid; (2) a host cell containing the vector; (3) an isolated
 CC polypeptide or its fragment whose expression is inhibited by the
 CC antisense nucleic acid; (4) an antibody capable of specifically binding
 CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular
 CC proliferation or the activity of a gene in an operon regulated for
 CC proliferation; (7) identifying a compound that influences the activity of
 CC the gene product or that has an activity against a biological pathway
 CC required for proliferation, or that inhibits cellular proliferation; (8)
 CC identifying a gene required for cellular proliferation or the biological
 CC pathway in which a proliferation-regulated gene or its gene product lies
 CC or a gene on which the test compound that inhibits proliferation of an
 CC organism acts; (9) manufacturing an antibiotic; (10) profiling a
 CC compound's activity; (11) a culture comprising strains in which the gene
 CC product is overexpressed or underexpressed; (12) determining the extent
 CC to which each of the strains is present in a culture or collection of
 CC strains; or (13) identifying the target of a compound that inhibits the
 CC proliferation of an organism. The antisense nucleic acids are useful for
 CC identifying proteins or screening for homologous nucleic acids required
 CC for cellular proliferation to isolate candidate molecules for rational
 CC drug discovery programs, or for screening homologous nucleic acids
 CC required for proliferation in cells other than S. aureus, S. typhimurium,
 CC K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of
 CC the target prokaryotic essential genes. Note: The sequence data for this
 CC patent did not form part of the printed specification, but was obtained
 CC in electronic format directly from WIPO at

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

 PT Antibody that binds to fibronectin-binding protein, preventing its
 PT binding to fibronectin - used to treat or prevent bacterial infection,
 PT especially by *Staphylococci* and *Streptococci*.
 PS Example 2; Page 92; 201pp; English.

XX The invention relates to antibodies that bind to a fibronectin-binding
 CC domain of a fibronectin-binding protein, and inhibit binding of the
 CC protein to fibronectin. Also claimed are: (1) isolated peptides of a
 CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
 CC protein containing at least one peptide of a fibronectin-binding protein
 CC linked to a second amino acid sequence; (3) nucleic acid encoding the
 CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
 CC nucleic acids are all useful for immunisation (active or passive) and (by
 CC inhibiting binding of bacteria to fibronectin) for preventing or treating
 CC infection in humans or other animals, particularly by *staphylococci* or
 CC *streptococci*, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65659-68 represent synthetic

CC epitopes from the fibronectin binding domains DU and D1-D4 of the *S.*
 CC *aureus* fnbA gene

 PT New fibronectin binding peptide - combines with fusion peptide to form
 PT large antigen, used in immunisation, diagnosis and for treating wounds.
 PS Claim 1; Page 22; 33pp; English.

XX The sequence comprises amino acids 17-33 of a tandem repeat, designated
 CC D3 of the fibronectin binding site of *Staphylococcus aureus* 8325-4 FNB.
 CC The N-terminal DK may be replaced with H or K, and the C-terminal LKP may
 CC be replaced by either L, LP, or OH. The peptides were synthesised using
 CC standard methods and purified using reverse phase HPLC. The appropriate
 CC fractions were dialysed and lyophilised. Peptide sequencing was performed
 CC and the peptides digested and chemically modified by dihydroxypropylation
 CC of the amino side chain of lysine. The carboxylic side chains were
 CC converted to glycine methyl esters. The phenyl side chains of tyrosine
 CC residues were oxidised. Chemically modified peptide D3 was compared to
 CC unmodified D3. Lysine and tyrosine modifications only partially
 CC diminished its activity whereas modification of aspartic/glutamic
 CC residues resulted in reduction of activity. The peptide can be used
 CC for the prevention or reduction of the risk of wound infection. The
 CC peptide can be used to create a large antigen for vaccinating ruminants
 CC against mastitis caused by *Staphylococcal* infections. It can also be used
 CC to diagnose *Staphylococcal* infections using ELISA or DNA probes. (Updated
 CC on 25-MAR-2003 to correct PA field.)

PT Modifying and attaching therapeutic peptides to albumin prevents
 PT peptidase degradation, useful for increasing length of in vivo activity.

PS Disclosure; Page 566; 733pp; English.

XX The present invention describes a modified therapeutic peptide (I)
 CC comprising a therapeutically active amino acid region (III) and a
 CC reactive group (II) (e.g. succinimidy) and maleimido groups) attached to
 CC a less therapeutically active amino acid region (IV), which covalently
 CC bonds with amino/hydroxyl/thiol groups on blood components to form a
 CC peptidease stabilised therapeutic peptide composed of 3-50 amino acids.
 CC (I) are useful for modifying therapeutic peptides e.g. hormones, growth
 CC factors and neurotransmitters, to protect them from peptidase activity in
 CC vivo for the treatment of various disorders. Endogenous therapeutic
 CC peptides are not suitable as drug candidates as they require frequent
 CC administration due to rapid degradation by peptidases in the body.
 CC Modifying and attaching therapeutic peptides to albumin prevents or
 CC reduces the action of peptidases to increase length of activity (half
 CC life) and specificity as bonding to large molecules decreases
 CC intracellular uptake and interference with physiological processes.
 CC AAB90829 to AAB92441 represent peptides which can be used in the
 CC exemplification of the present invention

PT Identifying, isolating and producing hyperimmune serum-reactive antigens
PT from a pathogen, for preparing vaccine or medicament for treating or
PT preventing e.g. staphylococcal infections, comprises providing antibody
PT preparation.
XX
PS Example 7; Page 157; 252pp; English.
XX
CC The invention relates to a novel method for identifying, isolating and
CC producing hyperimmune serum-reactive antigens from a pathogen, tumour,
CC allergen, a tissue or host prone to auto-immunity, where the antigens are
CC used in a vaccine, comprises providing antibody preparation from a plasma
CC pool of a type of animal, or individual sera with antibodies against the
CC specific pathogen, tumour, allergen, tissue or host prone to auto-
CC immunity. The hyperimmune serum-reactive antigens comprising any of the

CC 62 sequences of 53-2261 amino acids fully defined in the specification,
CC or their hyperimmune fragments are useful for the manufacture of a
CC pharmaceutical preparation, particularly a vaccine against staphylococcal
CC infections or colonisation against *S. aureus* or *S. epidermidis*. The
CC preparation of antibodies is useful for the manufacture of a medicament
CC for treating or preventing staphylococcal infections or colonisation
CC against *S. aureus* or *S. epidermidis*. The antibody preparations may also
CC be used for diagnostic and imaging purposes. Other conditions that can be
CC treated include cancer, autoimmune diseases or infections caused by viral
CC (e.g. HIV, hepatitis A, B or C), fungal or protozoan pathogens. This
CC sequence represents a staphylococcal protein relating to the method for
CC identifying and producing pathogen specific antigens of the invention

XX
PS Claim 1; SEQ ID NO 3554; 49pp; English.
XX
CC The invention relates to novel genes and encoded proteins from
CC *Staphylococcus aureus*. A composition comprising the *S. aureus* protein, a
CC nucleic acid encoding the protein, or an antibody to the protein, is
CC useful as a pharmaceutical, particularly as a vaccine for treating or
CC preventing infection due to *Staphylococcus* bacteria, specifically an
CC infection caused by *S. aureus*. The composition is particularly useful for
CC treating or preventing sepsis in a patient. The composition can also be
CC used for diagnostics. The protein is also used in an assay for enzymatic
CC studies and as a target for antibiotics. This sequence represents one of
CC the novel *S. aureus* proteins of the invention

(HUMA-) HUMAN GENOME SCI INC.

Kunesh CA, Choi GH, Barash SC, Dillon PJ, Fannon MR, Rosen CA;

WPI; 1997-374922/35.

Polynucleotide(s) and proteins derived from Staphylococcus aureus -
 stored on computer readable medium and used in the production of anti-
 S. aureus vaccines.

Claim 23; Page 3263-3267; 3271pp; English.

This sequence represents a Staphylococcus aureus protein sequence of the
 invention. The DNA sequences encoding the S. aureus proteins are recorded
 on a computer readable medium, preferably selected from a floppy or hard
 disk, random access memory (RAM), read-only memory (ROM) or CD-ROM.
 Homology searches using the S. aureus DNA sequences allows putative
 functions to be assigned so that protein-encoding or regulatory regions
 of commercial, therapeutic or industrial importance can be obtained.
 Specifically, sequences which are likely to encode antigens have been
 identified and these polypeptides can be used in a vaccine composition
 against S. aureus infection. The polypeptides can also be used in a kit
 for the immunodetection of S. aureus in a sample. S. aureus is implicated
 in numerous human diseases, including cellulitis, eyelid infections, food
 poisoning, osteomyelitis, skin and surgical wound infections, scalded
 skin syndrome, toxic shock syndrome, etc. Organisms transformed with the
 DNA sequences can be used for recombinant production of the polypeptides.
 The new DNA sequences (and their fragments) are useful as primers or
 probes for isolating homologues of any of the 5191 S. aureus DNA sequences
 contained on the computer readable medium

New antisense nucleic acids, useful for identifying proteins or screening
 for homologous nucleic acids required for cellular proliferation to
 isolate candidate molecules for rational drug discovery programs.

Claim 25; SEQ ID NO 43778; 1766pp; English.

The invention relates to an isolated nucleic acid comprising any one of
 the 623 antisense sequences given in the specification where expression
 of the nucleic acid inhibits proliferation of a cell. Also included are:
 (1) a vector comprising a promoter operably linked to the nucleic acid
 encoding a polypeptide whose expression is inhibited by the antisense
 nucleic acid; (2) a host cell containing the vector; (3) an isolated
 polypeptide or its fragment whose expression is inhibited by the
 antisense nucleic acid; (4) an antibody capable of specifically binding
 the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular
 proliferation or the activity of a gene in an operon required for
 proliferation; (7) identifying a compound that influences the activity of
 the gene product or that has an activity against a biological pathway
 required for proliferation, or that inhibits cellular proliferation; (8)
 identifying a gene required for cellular proliferation or the biological
 pathway in which a proliferation-regulated gene or its gene product lies
 or a gene on which the test compound that inhibits proliferation of an
 organism acts; (9) manufacturing an antibiotic; (10) profiling a
 compound's activity; (11) a culture comprising strains in which the gene
 product is overexpressed or underexpressed; (12) determining the extent
 to which each of the strains is present in a culture or collection of
 strains; or (13) identifying the target of a compound that inhibits the
 proliferation of an organism. The antisense nucleic acids are useful for
 identifying proteins or screening for homologous nucleic acids required
 for cellular proliferation to isolate candidate molecules for rational
 drug discovery programs, or for screening homologous nucleic acids
 required for proliferation in cells other than S. aureus, S. typhimurium,
 K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of
 the target prokaryotic essential genes. Note: The sequence data for this
 patent did not form part of the printed specification, but was obtained
 in electronic format directly from WIPO at

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

US-10-731-238-45
Sequence 45, Application US/10731238
Publication No. US20050123552A1

GENERAL INFORMATION:

APPLICANT: Hook, Magnus
Patti, Joseph M.
House-Pompeo, Karen L.
Speziale, Pietro
Joh, Danny
McGavin, Martin J.
TITLE OF INVENTION: FIBRONECTIN BINDING PROTEIN COMPOSITIONS
NUMBER OF SEQUENCES: 105
CORRESPONDENCE ADDRESS:
ADDRESSEE: Arnold, White & Durkee
STREET: P.O. Box 4433
CITY: Houston
STATE: TX
COUNTRY: USA
ZIP: 77210-4433

COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patent Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/10/731,238
FILING DATE: 10-Dec-2003
CLASSIFICATION: <Unknown>

PRIOR APPLICATION DATA:

APPLICATION NUMBER: US/09/010,317
FILING DATE: 21-Jan-1998
APPLICATION NUMBER: US 60/036,139
FILING DATE: 21-Jan-1997

ATTORNEY/AGENT INFORMATION:

NAME: Hibler, David W.
REGISTRATION NUMBER: 41,071
REFERENCE//DOCKET NUMBER: TAWK:189
TELECOMMUNICATION INFORMATION:
TELEPHONE: 512-418-3000
TELEFAX: 512-474-7577

INFORMATION FOR SEQ ID NO: 45:

SEQUENCE CHARACTERISTICS:
LENGTH: 38 amino acids
TYPE: amino acid
STRANDEDNESS: <Unknown>
TOPOLOGY: linear
SEQUENCE DESCRIPTION: SEQ ID NO: 45;
US-10-731-238-45

Query Match 79.8%; Score 174; DB 18; Length 38;

Best Local Similarity 86.8%; Pred. No. 3e-15;
Matches 33; Conservative 0; Mismatches 5; Indels 0; Gaps 0;

RT	from Staphylococcus aureus: use of this peptide sequence in the				
RT	synthesis of biologically active peptides."				
RL	Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).				
CC	-1- FUNCTION: The ability of bacteria to bind fibronectin has been				
CC	proposed as a virulence factor enabling bacteria to colonize wound				
CC	tissues and blood clots. Binding of plasma fibronectin to the				
CC	bacterial surface might block adhesion receptors on S.aureus, thus				
CC	representing an important defense mechanism against tissue				
CC	invasion.				
CC	-1- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by				
CC	an amide bond (Potential).

CC The invention relates to antibodies that bind to a fibronectin-binding
CC domain of a fibronectin-binding protein, and inhibit binding of the
CC protein to fibronectin. Also claimed are: (1) isolated peptides of a
CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
CC protein containing at least one peptide of a fibronectin-binding protein
CC linked to a second amino acid sequence; (3) nucleic acid encoding the
CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
CC nucleic acids are all useful for immunisation (active or passive) and (by
CC inhibiting binding of bacteria to fibronectin) for preventing or creating
CC infection in humans or other animals, particularly by staphylococci or

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65707-711 represent a series of
 CC synthetic peptides based on the DU region of *S. aureus* fibronectin
 CC binding protein A. They were synthesised to contain mutations

 PT New bovine herpes virus-2 vectors.
 PT
 XX
 PS Example 2; Fig 8A-B; 130pp; English.
 XX
 CC The invention provides bovine herpes virus-2 (BHV-2) based vectors that
 CC comprise at least one cytokine-encoding DNA sequence. The expression of
 CC cytokines in mammals can up-regulate immune responses to the immunogens.
 CC The cytokine is selected from interleukins (IL), colony stimulating
 CC factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The
 CC BHV-2 based vector or recombinant virus can be used as vaccines. They can
 CC be used for preventing or treating a mucosal disease in a subject, e.g.
 CC ruminants, cattle, sheep, goats, dogs, cats, horses, or man, particularly
 CC mastitis in cows or breast cancers in humans. They can also be used for
 CC preventing or treating a stress-induced disease. The present sequence
 CC represents the binding domain of a previously published *S. aureus*
 CC fibronectin binding protein A (FnBA) sequence. The FnB binding domain
 CC gene sequence FNBB, cloned for use in this invention has 97.8 percent
 CC identity when compared to the previously published FnBA and FnBB gene
 CC sequences

XX Hybrid DNA encoding Staphylococcus aureus fibronectin binding protein -

PT useful for immunisation and topical application to prevent staphylococcal

PT infections.

XX Disclosure; Fig. 8A:1-8A:2; 23pp; English.

XX The S.aureus fibronectin binding protein may be included in a hybrid

CC protein. The protein may be used to immunise ruminants against

CC staphylococcal mastitis, pref. when given at 0.5-5 mcg/kg, using 3

CC doses at 1-3 week intervals; and for topical applicn. to prevent wound

CC infection, pref. using isotonic saline soln. of concn. 25-250 mcg/mg.

CC The DNA encoding the binding protein and the hybrid protein may be

CC immobilised on a carrier and used to diagnose staphylococcal infections.

XX Identifying, isolating and producing hyperimmune serum-reactive antigens
PT from a pathogen, for preparing vaccine or medicament for treating or
PT preventing e.g. staphylococcal infections, comprises providing antibody
PT preparation.
XX
XX Example 7; Page 157; 252pp; English.
XX
XX The invention relates to a novel method for identifying, isolating and
CC producing hyperimmune serum-reactive antigens from a pathogen, tumour,
CC allergen, a tissue or host prone to auto-immunity, where the antigens are
CC used in a vaccine, comprises providing antibody preparation from a plasma
CC pool of a type of animal, or individual sera with antibodies against the
CC specific pathogen, tumour, allergen, tissue or host prone to auto-
CC immunity. The hyperimmune serum-reactive antigens comprising any of the
CC 62 sequences of 53-2261 amino acids fully defined in the specification,
CC or their hyperimmune fragments are useful for the manufacture of a
CC pharmaceutical preparation, particularly a vaccine against staphylococcal
CC infections or colonisation against S. aureus or S. epidermidis. The
CC preparation of antibodies is useful for the manufacture of a medicament
CC for treating or preventing staphylococcal infections or colonisation
CC against S. aureus or S. epidermidis. The antibody preparations may also
CC be used for diagnostic and imaging purposes. Other conditions that can be
CC treated include cancer, autoimmune diseases or infections caused by viral
CC (e.g. HIV, hepatitis A, B or C), fungal or protozoan pathogens. This
CC sequence represents a staphylococcal protein relating to the method for
CC identifying and producing pathogen specific antigens of the invention

XX New Staphylococcus aureus protein, useful as a vaccine for treating or
PT preventing Staphylococcal infection, specifically an infection caused by
PT S. aureus, e.g. sepsis.
XX Claim 1; SEQ ID NO 3554; 49pp; English.
XX The invention relates to novel genes and encoded proteins from
CC Staphylococcus aureus. A composition comprising the S. aureus protein, a
CC nucleic acid encoding the protein, or an antibody to the protein, is
CC useful as a pharmaceutical, particularly as a vaccine for treating or
CC preventing infection due to Staphylococcus bacteria, specifically an
CC infection caused by S. aureus. The composition is particularly useful for
CC treating or preventing sepsis in a patient. The composition can also be
CC used for diagnostics. The protein is also used in an assay for enzymatic
CC studies and as a target for antibiotics. This sequence represents one of
CC the novel S. aureus proteins of the invention

PT Polynucleotide(s) and proteins derived from Staphylococcus aureus -
PT stored on computer readable medium and used in the production of anti-
PT S. aureus vaccines.
XX Claim 23; Page 3263-3267; 3271pp; English.
XX
XX This sequence represents a Staphylococcus aureus protein sequence of the
CC invention. The DNA sequences encoding the S. aureus proteins are recorded
CC on a computer readable medium, preferably selected from a floppy or hard
CC disk, random access memory (RAM), read-only memory (ROM) or CD-ROM.
CC Homology searches using the S. aureus DNA sequences allows putative
CC functions to be assigned so that protein-encoding or regulatory regions
CC of commercial, therapeutic or industrial importance can be obtained.
CC Specifically, sequences which are likely to encode antigens have been
CC identified and these polypeptides can be used in a vaccine composition
CC against S. aureus infection. The polypeptides can also be used in a kit
CC for the immunodetection of S. aureus in a sample. S. aureus is implicated
CC in numerous human diseases, including cellulitis, eyelid infections, food
CC poisoning, osteomyelitis, skin and surgical wound infections, scalded
CC skin syndrome, toxic shock syndrome, etc. Organisms transformed with the
CC DNA sequences can be used for recombinant production of the polypeptides.
CC The new DNA sequences (and their fragments) are useful as primers or
CC probes for isolating homologues of any of the 5191 S. aureus DNA sequences
CC contained on the computer readable medium

XX (95%). Downstream is a stretch of 66 AAs with 75% homology to the same

XX stretch in fnbB. The following 44 AAs have only 40% homology and the B

XX repeats in fnbB are absent. However the rest of the peptide (394 AAs is

XX nearly identical to fnbB, the main difference being a deletion of 14 AAs.

XX This highly homologous region contains the same repeat (D1-D4 and W1-5)

XX found in fnbB with the exception that W1 is missing. The WC region and

XX the hydrophobic M domain as well as the C-terminal end are conserved.

XX (Updated on 25-MAR-2003 to correct PR field.) (Updated on 25-MAR-2003 to

XX correct PA field.)

XX Identifying, isolating and producing hyperimmune serum-reactive antigens

XX from a pathogen, for preparing vaccine or medicament for treating or

XX preventing e.g. staphylococcal infections, comprises providing antibody

XX preparation.

XX Example 7; Page 223; 252pp; English.

XX The invention relates to a novel method for identifying, isolating and

XX producing hyperimmune serum-reactive antigens from a pathogen, tumour,

XX allergen, a tissue or host prone to auto-immunity, where the antigens are

XX used in a vaccine, comprises providing antibody preparation from a plasma

XX pool of a type of animal, or individual sera with antibodies against the

XX specific pathogen, tumour, allergen, tissue or host prone to auto-

XX immunity. The hyperimmune serum-reactive antigens comprising any of the

XX 62 sequences of 53-2261 amino acids fully defined in the specification,

XX or their hyperimmune fragments are useful for the manufacture of a

XX pharmaceutical preparation, particularly a vaccine against staphylococcal

XX infections or colonisation against S. aureus or S. epidermidis. The

XX preparation of antibodies is useful for the manufacture of a medicament

XX for treating or preventing staphylococcal infections or colonisation

XX against S. aureus or S. epidermidis. The antibody preparations may also

XX be used for diagnostic and imaging purposes. Other conditions that can be

XX treated include cancer, autoimmune diseases or infections caused by viral

XX (e.g. HIV, hepatitis A, B or C), fungal or protozoan pathogens. This

XX sequence represents a staphylococcal protein relating to the method for

XX identifying and producing pathogen specific antigens of the invention

 PS Claim 4; Page 124-125; 189pp; English.
 XX
 CC The present invention describes an antigenic protein or its part, which
 CC is for use as a vaccine. The antigenic protein is encoded by an isolated
 CC DNA molecule of Staphylococcus aureus or S. epidermidis partial gene
 CC sequences (designated dnash and dna SE, respectively) and which encodes a
 CC protein expressed by a pathogenic organism. Also described: (1) a vaccine
 CC composition comprising at least one antigenic protein; (2) a method of
 CC immunising an animal against a disease or condition caused by a
 CC pathogenic microbe by administering the antigenic protein or the vaccine;
 CC (3) an antibody or its binding part obtainable by the method above; (4)
 CC preparing a hybridoma cell line producing monoclonal antibodies; (5) a
 CC hybridoma cell line produced by the method of (4); and (6) identifying
 CC epsonic antigens expressed by a pathogenic microbe. The antigenic
 CC proteins have antibacterial, neuroprotective, immunosuppressive,
 CC antiinflammatory, antitumor, immunostimulant and ophthalmological
 CC activities, and can be used in vaccines. The antigenic proteins or
 CC vaccines can be used for immunising an animal (specifically, a human)
 CC against a disease or condition caused by a pathogenic microbe, e.g.
 CC bacteraemia, septic shock, organ infection, skin infection bacterial
 CC basal colonisation, bacterial eye infections, septicaemia, tuberculosis,
 CC bacteria-associated food poisoning, blood infections, peritonitis,
 CC endocarditis, sepsis, meningitis, pneumonia, stomach ulcer, gonorrhoea,
 CC strep throat, streptococcal-associated toxic shock, necrotising
 CC fasciitis, impetigo, histoplasmosis, Lyme disease, gastro-intestitis,
 CC dysentery, shigellosis, S. aureus-associated septicaemia, food-poisoning,
 CC skin disorders, S. epidermidis-associated septicaemia, peritonitis or
 CC endocarditis. The present sequence represents a S. aureus antigenic
 CC protein sequence from the present invention.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

RT from Staphylococcus aureus: use of this peptide sequence in the
RT synthesis of biologically active peptides."
RL Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
CC -!- FUNCTION: The ability of bacteria to bind fibronectin has been
CC proposed as a virulence factor enabling bacteria to colonize wound
CC tissues and blood clots. Binding of plasma fibronectin to the
CC bacterial surface might block adhesion receptors on S.aureus, thus
CC representing an important defense mechanism against tissue
CC invasion.
CC -!- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
CC an amide bond (Potential).

 PT Antibody that binds to fibronectin-binding protein, preventing its
 PT binding to fibronectin - used to treat or prevent bacteria infection,
 PT especially by Staphylococci and Streptococci.
 XX
 PS Example 2; Page 92; 201pp; English.
 XX
 CC The invention relates to antibodies that bind to a fibronectin-binding
 CC domain of a fibronectin-binding protein, and inhibit binding of the
 CC protein to fibronectin. Also claimed are: (1) isolated peptides of a
 CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
 CC protein containing at least one peptide of a fibronectin-binding protein
 CC linked to a second amino acid sequence; (3) nucleic acid encoding the
 CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
 CC nucleic acids are all useful for immunisation (active or passive) and (by
 CC inhibiting binding of bacteria to fibronectin) for preventing or treating
 CC infection in humans or other animals, particularly by staphylococci or
 CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65659-68 represent synthetic
 CC epitopes from the fibronectin binding domain DU and DI-D4 of the S.

 PT New bovine herpes virus-2 vectors.
 XX
 PS Example 2; Fig 8A-B; 130pp; English.
 XX
 CC The invention provides bovine herpes virus-2 (BHV-2) based vectors that
 CC comprise at least one cytokine-encoding DNA sequence. The expression of
 CC cytokines in mammals can up-regulate immune responses to the immunogens.
 CC The cytokine is selected from interleukins (IL), colony stimulating
 CC factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The
 CC BHV-2 based vector or recombinant virus can be used as vaccines. They can
 CC be used for preventing or treating a mucosal disease in a subject, e.g.
 CC ruminants, cattle, sheep, goats, dogs, cats, horses, or man, particularly
 CC mastitis in cows or breast cancers in humans. They can also be used for
 CC preventing or treating a stress-induced disease. The present sequence
 CC represents the binding domain of a previously published *S. aureus*
 CC fibronectin binding protein A (FnBA) sequence. The FnB binding domain
 CC gene sequence FNMB, cloned for use in this invention has 97.8 percent
 CC identity when compared to the previously published Fnba and Fnab gene
 CC sequences

XX New polynucleotides for the identification and development of

XX antibiotics, comprise sequences of antisense nucleic acids.

XX Example 3; SEQ ID NO 12838; 511pp; English.

XX The invention relates to antisense inhibitors of genes essential to
CC prokaryotic cellular proliferation, their use in identifying the genes,
CC their use in the discovery of novel antibiotics, the essential genes
CC themselves and the encoded proteins. The prokaryotes used are Escherichia
CC coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae,
CC Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also
CC useful for the identification of potential new targets for antibiotic
CC development. The antisense nucleic acids can also be used to identify
CC proteins used in proliferation, to express these proteins. The proteins can
CC antibodies capable of binding to the expressed proteins. The proteins can
CC be used to screen compounds in rational drug discovery programmes. The
CC antisense nucleic acid sequence is also useful to screen for homologous
CC nucleic acids which are required for cell proliferation in a wide variety
CC of organisms. The present sequence represents an essential prokaryotic
CC cellular proliferation protein. Note: The sequence data for this patent
CC did not form part of the printed specification, but was obtained in
CC electronic format directly from WIPO at

XX
XX   Identifying, isolating and producing hyperimmune serum-reactive antigens
PT   from a pathogen, for preparing vaccine or medicament for treating or
PT   preventing e.g. staphylococcal infections, comprises providing antibody
PT   preparation.
XX
XX   Example 7; Page 157; 252pp; English.
XX
XX   The invention relates to a novel method for identifying, isolating and
CC   producing hyperimmune serum-reactive antigens from a pathogen, tumour,
CC   allergen, a tissue or host prone to auto-immunity, where the antigens are
CC   used in a vaccine, comprises providing antibody preparation from a plasma
CC   pool of a type of animal, or individual sera with antibodies against the
CC   specific pathogen, tumour, allergen, tissue or host prone to auto-
CC   immunity. The hyperimmune serum-reactive antigens comprising any of the
CC   62 sequences of 53-2261 amino acids fully defined in the specification,
CC   or their hyperimmune fragments are useful for the manufacture of a
CC   pharmaceutical preparation, particularly a vaccine against staphylococcal
CC   infections or colonisation against S. aureus or S. epidermidis. The
CC   preparation of antibodies is useful for the manufacture of a medicament
CC   for treating or preventing staphylococcal infections or colonisation
CC   against S. aureus or S. epidermidis. The antibody preparations may also
CC   be used for diagnostic and imaging purposes. Other conditions that can be
CC   treated include cancer, autoimmune diseases or infections caused by viral
CC   (e.g. HIV, hepatitis A, B or C), fungal or protozoan pathogens. This
CC   sequence represents a staphylococcal protein relating to the method for
CC   identifying and producing pathogen specific antigens of the invention

 XX PT New Staphylococcus aureus protein, useful as a vaccine for treating or
 PT preventing Staphylococcal infection, specifically an infection caused by
 PT S. aureus, e.g. sepsis.
 PS Claim 1; SEQ ID NO 3554; 49pp; English.
 XX The invention relates to novel genes and encoded proteins from
 CC Staphylococcus aureus. A composition comprising the S. aureus protein, a
 CC nucleic acid encoding the protein, or an antibody to the protein, is
 CC useful as a pharmaceutical, particularly as a vaccine for treating or
 CC preventing infection due to Staphylococcus bacteria, specifically an
 CC infection caused by S. aureus. The composition is particularly useful for
 CC treating or preventing sepsis in a patient. The composition can also be
 CC used for diagnostics. The protein is also used in an assay for enzymatic
 CC studies and as a target for antibiotics. This sequence represents one of
 CC the novel S. aureus proteins of the invention

 XX

PT Polynucleotide(s) and proteins derived from Staphylococcus aureus -
 PT stored on computer readable medium and used in the production of anti-
 PT S. aureus vaccines.
 XX Claim 23; Page 3263-3267; 3271pp; English.
 XX This sequence represents a Staphylococcus aureus protein sequence of the
 CC invention. The DNA sequences encoding the S. aureus proteins are recorded
 CC on a computer readable medium, preferably selected from a floppy or hard
 CC disk, random access memory (RAM), read-only memory (ROM) or CD-ROM.
 CC Homology searches using the S. aureus DNA sequences allows putative
 CC functions to be assigned so that protein-encoding or regulatory regions
 CC of commercial, therapeutic or industrial importance can be obtained.
 CC Specifically, sequences which are likely to encode antigens have been
 CC identified and these polypeptides can be used in a vaccine composition
 CC against S. aureus infection. The polypeptides can also be used in a kit
 CC for the immunodetection of S. aureus in a sample. S. aureus is implicated
 CC in numerous human diseases, including cellulitis, eyelid infections, food
 CC poisoning, osteomyelitis, skin and surgical wound infections, scalded
 CC skin syndrome, toxic shock syndrome, etc. Organisms transformed with the
 CC DNA sequences can be used for recombinant production of the polypeptides.
 CC The new DNA sequences (and their fragments) are useful as primers or
 CC probes for isolating homologues of any of the 5191 S. aureus DNA sequences
 CC contained on the computer readable medium

 XX

CC The invention provides bovine herpes virus-2 (BHV-2) based vectors that
CC comprise at least one cytokine-encoding DNA sequence. The expression of
CC cytokines in mammals can up-regulate immune responses to the immunogens.
CC The cytokine is selected from interleukins (IL), colony stimulating
CC factors (CSF), interferons (IFN) and tumor necrosis factors (TNF). The
CC BHV-2 based vector or recombinant virus can be used as vaccines. They can
CC be used for preventing or treating a mucosal disease in a subject, e.g.
CC ruminants, cattle, sheep, goats, dogs, cats, horses, or man, particularly
CC mastitis in cows or breast cancers in humans. They can also be used for
CC preventing or treating a stress-induced disease. The present sequence
CC represents a S. aureus fibronectin binding protein binding domain
CC sequence FNAB, the gene cloned for use in this invention. The gene has
CC 97.8 percent identity when compared to the previously published sequences
CC FNBA and FNBB

 PS Claim 4; Page 124-125; 189pp; English.
 CC
 CC The present invention describes an antigenic protein or its part, which
 CC is for use as a vaccine. The antigenic protein is encoded by an isolated
 CC DNA molecule of Staphylococcus aureus or S. epidermidis partial gene
 CC sequences (designated dnaSA and dna SE, respectively; and which encodes a
 CC protein expressed by a pathogenic organism. Also described: (1) a vaccine
 CC composition comprising at least one antigenic protein; (2) a method of
 CC immunising an animal against a disease or condition caused by a
 CC pathogenic microbe by administering the antigenic protein or the vaccine;
 CC (3) an antibody or its binding part obtainable by the method above; (4)
 CC preparing a hybridoma cell line producing monoclonal antibodies; (5) a
 CC hybridoma cell line produced by the method of (4); and (6) identifying
 CC opsonic antigens expressed by a pathogenic microbe. The antigenic
 CC proteins have antibacterial, neuroprotective, immunosuppressive,
 CC antiinflammatory, antifungal, immunostimulant and ophthalmological
 CC activities, and can be used in vaccines. The antigenic proteins or
 CC vaccines can be used for immunising an animal (specifically a human)
 CC against a disease or condition caused by a pathogenic microbe, e.g.
 CC bacteraemia, septic shock, organ infection, skin infection, bacterial
 CC basal colonisation, bacterial eye infections, septicaemia, tuberculosis,
 CC bacteria-associated food poisoning, blood infections, peritonitis,
 CC endocarditis, sepsis, meningitis, pneumonia, stomach ulcer, gonorrhoea,
 CC strep throat, streptococcal-associated toxic shock, necrotising
 CC fasciitis, impetigo, histoplasmosis, Lyme disease, gastro-enteritis,
 CC dysentery, shigellosis, S. aureus-associated septicaemia, food-poisoning,
 CC skin disorders, S. epidermidis-associated septicaemia, peritonitis or
 CC endocarditis. The present sequence represents a S. aureus antigenic
 CC protein sequence from the present invention.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

RT "Nucleotide sequence of the gene for a fibronectin-binding protein
  from Staphylococcus aureus: use of this peptide sequence in the
  synthesis of biologically active peptides."
RL Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
CC -!- FUNCTION: The ability of bacteria to bind fibronectin has been
  proposed as a virulence factor enabling bacteria to colonize wound
  tissues and blood clots. Binding of plasma fibronectin to the
  bacterial surface might block adhesion receptors on S.aureus, thus
  representing an important defense mechanism against tissue
  invasion.
CC -!- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
  an amide bond (Potential).

Antibody that binds to fibronectin-binding protein, preventing its
binding to fibronectin - used to treat or prevent bacterial infection,
especially by Staphylococci and Streptococci.
Example 8; Page 102; 201p; English.
The invention relates to antibodies that bind to a fibronectin-binding
domain of a fibronectin-binding protein, and inhibit binding of the
protein to fibronectin. Also claimed are: (1) isolated peptides of a
fibronectin-binding protein that do not bind to fibronectin; (2) fusion
protein containing at least one peptide of a fibronectin-binding protein
linked to a second amino acid sequence; (3) nucleic acid encoding the
isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
nucleic acids are all useful for immunisation (active or passive) and (by
inhibiting binding of bacteria to fibronectin) for preventing or treating
infection in humans or other animals, particularly by staphylococci or

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65707-711 represent a series of
 CC synthetic peptides based on the DU region of *S. aureus* fibronectin
 CC binding protein A. They were synthesized to contain mutations

 PT New bovine herpes virus-2 vectors.
 XX
 PS Example 2; Fig 8A-B; 130pp; English.
 XX
 CC The invention provides bovine herpes virus-2 (BHV-2) based vectors that
 CC comprise at least one cytokine-encoding DNA sequence. The expression of
 CC cytokines in mammals can up-regulate immune responses to the immunogens.
 CC The cytokine is selected from interleukins (IL), colony stimulating
 CC factors (CSF), interferons (IFN) and tumor necrosis factors (TNF). The
 CC BHV-2 based vector or recombinant virus can be used as vaccines. They can
 CC be used for preventing or treating a mucosal disease in a subject, e.g.
 CC ruminants, cattle, sheep, goats, dogs, cats, horses, or man, particularly
 CC mastitis in cows or breast cancers in humans. They can also be used for
 CC preventing or treating a stress-induced disease. The present sequence
 CC represents the binding domain of a previously published S. aureus
 CC fibronectin binding protein A (FnBA) sequence. The FnB binding domain
 CC gene sequence FNMB, cloned for use in this invention has 97.8 percent
 CC identity when compared to the previously published FnBA and FnBB gene
 CC sequences

XX New polynucleotides for the identification and development of

XX antibiotics, comprise sequences of antisense nucleic acids.

XX Example 3; SEQ ID NO 12838; 511pp; English.

XX The invention relates to antisense inhibitors of genes essential to
CC prokaryotic cellular proliferation, their use in identifying the genes,
CC their use in the discovery of novel antibiotics, the essential genes
CC themselves and the encoded proteins. The prokaryotes used are Escherichia
CC coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae,
CC Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also
CC useful for the identification of potential new targets for antibiotic
CC development. The antisense nucleic acids can also be used to identify
CC proteins used in proliferation, to express these proteins, and to obtain
CC antibodies capable of binding to the expressed proteins. The proteins can
CC be used to screen compounds in rational drug discovery programmes. The
CC antisense nucleic acid sequence is also useful to screen for homologous
CC nucleic acids which are required for cell proliferation in a wide variety
CC of organisms. The present sequence represents an essential prokaryotic
CC cellular proliferation protein. Note: The sequence data for this patent
CC did not form part of the printed specification, but was obtained in

XX Identifying, isolating and producing hyperimmune serum-reactive antigens
XX from a pathogen, for preparing vaccine or medicament for treating or
XX preventing e.g. staphylococcal infections, comprises providing antibody
XX preparation.
XX
XX Example 7; Page 157; 252pp; English.
XX
XX The invention relates to a novel method for identifying, isolating and
XX producing hyperimmune serum-reactive antigens from a pathogen, tumour,
XX allergen, a tissue or host prone to auto-immunity, where the antigens are
XX used in a vaccine, comprises providing antibody preparation from a plasma
XX pool of a type of animal, or individual sera with antibodies against the
XX specific pathogen, tumour, allergen, tissue or host prone to auto-
XX immunity. The hyperimmune serum-reactive antigens comprising any of the
XX 62 sequences of 53-2261 amino acids fully defined in the specification,
XX or their hyperimmune fragments are useful for the manufacture of a
XX pharmaceutical preparation, particularly a vaccine against staphylococcal
XX infections or colonisation against S. aureus or S. epidermidis. The
XX preparation of antibodies is useful for the manufacture of a medicament
XX for treating or preventing staphylococcal infections or colonisation
XX against S. aureus or S. epidermidis. The antibody preparations may also
XX be used for diagnostic and imaging purposes. Other conditions that can be
XX treated include cancer, autoimmune diseases or infections caused by viral
XX (e.g. HIV, hepatitis A, B or C), fungal or protozoan pathogens. This
XX sequence represents a staphylococcal protein relating to the method for
XX identifying and producing pathogen specific antigens of the invention

XX New Staphylococcus aureus protein, useful as a vaccine for treating or
PT preventing Staphylococcal infection, specifically an infection caused by
PT S. aureus, e.g. sepsis.
XX
PS Claim 1; SEQ ID NO 3554; 49pp; English.
XX
XX The invention relates to novel genes and encoded proteins from
CC Staphylococcus aureus. A composition comprising the S. aureus protein, a
CC nucleic acid encoding the protein, or an antibody to the protein, is
CC useful as a pharmaceutical, particularly as a vaccine for treating or
CC preventing infection due to Staphylococcus bacteria, specifically an
CC infection caused by S. aureus. The composition is particularly useful for
CC treating or preventing sepsis in a patient. The composition can also be
CC used for diagnostics. The protein is also used in an assay for enzymatic
CC studies and as a target for antibiotics. This sequence represents one of
CC the novel S. aureus proteins of the invention

PT Polynucleotide(s) and proteins derived from Staphylococcus aureus -
PT stored on computer readable medium and used in the production of anti-
PT S.aureus vaccines.
XX
XX Claim 23; Page 3263-3267; 3271pp; English.
PS
XX
XX This sequence represents a Staphylococcus aureus protein sequence of the
CC invention. The DNA sequences encoding the S.aureus proteins are recorded
CC on a computer readable medium, preferably selected from a floppy or hard
CC disk, random access memory (RAM), read-only memory (ROM) or CD-ROM.
CC Homology searches using the S.aureus DNA sequences allows putative
CC functions to be assigned so that protein-encoding or regulatory regions
CC of commercial, therapeutic or industrial importance can be obtained.
CC Specifically, sequences which are likely to encode antigens have been
CC identified and these polypeptides can be used in a vaccine composition
CC against S.aureus infection. The polypeptides can also be used in a kit
CC for the immunodetection of S.aureus in a sample. S.aureus is implicated
CC in numerous human diseases, including cellulitis, eyelid infections, food
CC poisoning, osteomyelitis, skin and surgical wound infections, scalded
CC skin syndrome, toxic shock syndrome, etc. Organisms transformed with the
CC DNA sequences can be used for recombinant production of the polypeptides.
CC The new DNA sequences (and their fragments) are useful as primers or
CC probes for isolating homologues of any of the 5191 S.aureus DNA sequences
CC contained on the computer readable medium

 XX Fibronectin binding protein gene - isolated from S. aureus and used for
 PT producing protein for wound healing, immunisation or diagnosis.
 PS Claim 11; Page 17; 24pp; English.
 XX The sequence is deduced from a gene, designated gene 2 (fnbB), localised
 CC downstream of that disclosed in SE8702272 (gene 1; fnbA) encoding a
 CC fibronectin binding protein, fnbA in S. aureus. Gene 2 encodes fnbB.
 CC The two proteins show considerable homology, esp. in the signal sequence
 CC (95%). Downstream is a stretch of 66 AAs with 75% homology to the same
 CC stretch in fnbPA. The following 444 AAs have only 40% homology and the B
 CC repeats of fnbPA are absent. However the rest of the peptide (394 AAs) is
 CC nearly identical to fnbPA, the main difference being a deletion of 14 AAs.
 CC This highly homologous region contains the same repeat (D1-D4 and W1-5)
 CC found in fnbPA with the exception that W1 is missing. The Wc region and
 CC the hydrophobic M domain as well as the C-terminal end are conserved.
 CC (Updated on 25-MAR-2003 to correct PR field.) (Updated on 25-MAR-2003 to
 CC correct PA field.)

 DR Identifying, isolating and producing hyperimmune serum-reactive antigens
 PT from a pathogen, for preparing vaccine or medicament for treating or
 PT preventing e.g. staphylococcal infections, comprises providing antibody
 PT preparation.
 PS Example 7; Page 223; 252pp; English.
 XX The invention relates to a novel method for identifying, isolating and
 CC producing hyperimmune serum-reactive antigens from a pathogen, tumour,
 CC allergen, a tissue or host prone to auto-immunity, where the antigens are
 CC used in a vaccine, comprises providing antibody preparation from a plasma
 CC pool of a type of animal, or individual sera with antibodies against the
 CC specific pathogen, tumour, allergen, tissue or host prone to auto-
 CC immunity. The hyperimmune serum-reactive antigens comprising any of the
 CC 62 sequences of 53-2261 amino acids fully defined in the specification,
 CC or their hyperimmune fragments are useful for the manufacture of a
 CC pharmaceutical preparation, particularly a vaccine against staphylococcal
 CC infections or colonisation against S. aureus or S. epidermidis. The
 CC preparation of antibodies is useful for the manufacture of a medicament
 CC for treating or preventing staphylococcal infections or colonisation
 CC against S. aureus or S. epidermidis. The antibody preparations may also
 CC be used for diagnostic and imaging purposes. Other conditions that can be
 CC treated include cancer, autoimmune diseases or infections caused by viral
 CC (e.g. HIV, hepatitis A, B or C), fungal or protozoan pathogens. This
 CC sequence represents a staphylococcal protein relating to the method for
 CC identifying and producing pathogen specific antigens of the invention

 XX
 PS Claim 4; Page 124-125; 189pp; English.
 XX
 CC The present invention describes an antigenic protein or its part, which
 CC is for use as a vaccine. The antigenic protein is encoded by an isolated
 CC DNA molecule of Staphylococcus aureus or S. epidermidis partial gene
 CC sequences (designated dnaSA and dna SE, respectively; and which encodes a
 CC protein expressed by a pathogenic organism. Also described: (1) a vaccine
 CC composition comprising at least one antigenic protein; (2) a method of
 CC immunising an animal against a disease or condition caused by a
 CC pathogenic microbe by administering the antigenic protein or the vaccine;
 CC (3) an antibody or its binding part obtainable by the method above; (4)
 CC preparing a hybridoma cell line producing monoclonal antibodies; (5) a
 CC hybridoma cell line produced by the method of (4); and (6) identifying
 CC opsonic antigens expressed by a pathogenic microbe. The antigenic
 CC proteins have antibacterial, neuroprotective, immunosuppressive,
 CC antiinflammatory, antitumor, immunostimulant and ophthalmological
 CC activities, and can be used in vaccines. The antigenic proteins or
 CC vaccines can be used for immunising an animal (specifically a human)
 CC against a disease or condition caused by a pathogenic microbe, e.g.
 CC bacteraemia, septic shock, organ infection, skin infection, bacterial
 CC basal colonisation, bacterial eye infections, septicemia, tuberculosis,
 CC bacteria-associated food poisoning, blood infections, peritonitis,
 CC endocarditis, sepsis, meningitis, pneumonia, stomach ulcers, gonorrhoea,
 CC strep throat, streptococcal-associated toxic shock, necrotising
 CC fasciitis, impetigo, histoplasmosis, Lyme disease, gastro-enteritis,
 CC dysentery, shigellosis, S. aureus-associated septicemia, food-poisoning,
 CC skin disorders, S. epidermidis-associated septicemia, peritonitis or
 CC endocarditis. The present sequence represents a S. aureus antigenic
 CC protein sequence from the present invention.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

3: PIR3: *
4: PIR4: *

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

RT	Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).			
CC	- FUNCTION: The ability of bacteria to bind fibronectin has been proposed as a virulence factor enabling bacteria to colonize wound tissues and blood clots. Binding of plasma fibronectin to the bacterial surface might block adhesion receptors on S.aureus, thus representing an important defense mechanism against tissue invasion.			
CC	- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by an amide bond (Potential).

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysts of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

SUMMARIES

RT	"Nucleotide sequence of the gene for a fibronectin-binding protein				
RT	from Staphylococcus aureus: use of this peptide sequence in the				
RT	synthesis of biologically active peptides."				
RL	Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).				
CC	-1- FUNCTION: The ability of bacteria to bind fibronectin has been				
CC	proposed as a virulence factor enabling bacteria to colonize wound				
CC	tissues and blood clots. Binding of plasma fibronectin to the				
CC	bacterial surface might block adhesion receptors on S.aureus, thus				
CC	representing an important defense mechanism against tissue				
CC	invasion.				
CC	-1- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by				
CC	an amide bond (Potential).

 CC -1- FUNCTION: Decarboxylates L-threonine-O-3-phosphate to yield (R)-1-
 CC amino-2-propanol O-2-phosphate, the precursor for the linkage
 CC between the nucleotide loop and the corrin ring in cobalamin (by
 CC similarity).
 CC -1- CATALYTIC ACTIVITY: L-threonine O-3-phosphate = (R)-1-aminopropan-
 CC 2-yl phosphate + CO(2).
 CC -1- COFACTOR: Pyridoxal phosphate (By similarity).
 CC -1- PATHWAY: Adenosylcobalamin biosynthesis; conversion of
 CC adenosylcobyrinic acid to adenosylcobinamide.
 CC -1- SIMILARITY: Belongs to the class-II pyridoxal-phosphate-dependent
 CC aminotransferase family.

Antibody that binds to fibronecin-binding protein, preventing its

binding to fibronecin - used to treat or prevent bacterial infection,

especially by Staphylococci and Streptococci.

Example 8; Page 102; 201pp; English.

The invention relates to antibodies that bind to a fibronecin-binding domain of a fibronecin-binding protein, and inhibit binding of the protein to a fibronecin. Also claimed are: (1) isolated peptides of a fibronecin-binding protein that do not bind to fibronecin; (2) fusion protein containing at least one peptide of a fibronecin-binding protein linked to a second amino acid sequence; (3) nucleic acid encoding the isolated peptide of (1). Antibodies, the isolated peptides of (1) and the nucleic acids are all useful for immunisation (active or passive) and (by inhibiting binding of bacteria to fibronecin) for preventing or treating infection in humans or other animals, particularly by staphylococci or

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65701-706 represent a series of
 CC synthetic peptides based on the D2 region of *S. aureus* fibronectin
 CC binding protein A. They were synthesised to contain mutations

 PS Example 2; Fig 8A-B; 130pp; English.
 XX
 CC The invention provides bovine herpes virus-2 (BHV-2) based vectors that
 CC comprise at least one cytokine-encoding DNA sequence. The expression of
 CC cytokines in mammals can up-regulate immune responses to the immunogens.
 CC The cytokine is selected from interleukins (IL), colony stimulating
 CC factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The
 CC BHV-2 based vector or recombinant virus can be used as vaccines. They can
 CC be used for preventing or treating a mucosal disease in a subject, e.g.
 CC ruminants, cattle, sheep, goats, dogs, cats, horses, or man, particularly
 CC mastitis in cows or breast cancers in humans. They can also be used for
 CC preventing or treating a stress-induced disease. The present sequence
 CC represents the binding domain of a previously published *S. aureus*
 CC fibronectin binding protein A (FnBA) sequence. The FnB binding domain
 CC gene sequence FNBA-B, cloned for use in this invention has 97.8 percent
 CC identity when compared to the previously published FnBA and FnBB gene
 CC sequences

Antibody that interacts with collagen binding domain of Staphylococcal pT cna gene product - useful to prevent bacterial sepsis in animal infected with Staphylococcus aureus.

PS Disclosure; Page 91; 143pp; English.

XX This protein comprises Staphylococcus aureus fibronectin-binding
CC microbial surface component regonising adhesive matrix molecule (MSCRAMM)
CC derivative pOD, plus a vector-derived N-terminal peptide. The invention
CC relates to claimed nucleic acid sequences (see AAT93436-38) encoding S.
CC aureus collagen binding protein (CBP) epitopes M1, M31 and M55 (see
CC AAM31552-54) that confer protection against S. aureus infection. CBP
CC protein and antigenic epitopes are contemplated for use in the treatment
CC of pathological infections, especially to prevent bacterial adhesion to
CC collagen. The epitopes are also contemplated for use in the preparation
CC of vaccines and as carrier proteins in vaccine formulations, as well as
CC in the formulation of compositions for the prevention of S. aureus
CC infection. pCP33 and pOD (see AAM31556) were used to raise anti-MSCRAMM
CC polyclonal antibodies used in passive immunisation against bovine
CC mastitis. (Updated on 25-MAR-2003 to correct PI field.) (Updated on 27-
CC AUG-2003 to correct OS field.)

Hybrid DNA encoding Staphylococcus aureus fibronectin binding protein -

useful for immunisation and topical application to prevent staphylococcal

infections.

PS Disclosure; Fig. 8A:1-8A:2; 23pp; English.

XX The S. aureus fibronectin binding protein may be included in a hybrid
CC protein. The protein may be used to immunise ruminants against
CC staphylococcal mastitis, pref. when given at 0.5-5 microg/kg, using 3
CC doses at 1-3 week intervals; and for topical applicn. to prevent wound
CC infection, pref. using isotonic saline soln. of concn. 25-250 microg/mg.
CC The DNA encoding the binding protein and the hybrid protein may be
CC immobilised on a carrier and used to diagnose staphylococcal infections.

XX
XX New polynucleotides for the identification and development of
PT antibiotics, comprise sequences of antisense nucleic acids.
XX
XX Example 3; SEQ ID NO 12838; 511pp; English.
XX
XX The invention relates to antisense inhibitors of genes essential to
CC prokaryotic cellular proliferation, their use in identifying the genes,
CC their use in the discovery of novel antibiotics, the essential genes
CC themselves and the encoded proteins. The prokaryotes used are Escherichia
CC coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae,
CC Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also
CC useful for the identification of potential new targets for antibiotic
CC development. The antisense nucleic acids can also be used to identify
CC proteins used in proliferation, to express these proteins, and to obtain
CC antibodies capable of binding to the expressed proteins. The proteins can
CC be used to screen compounds in rational drug discovery programmes. The
CC antisense nucleic acid sequence is also useful to screen for homologous
CC nucleic acids which are required for cell proliferation in a wide variety
CC of organisms. The present sequence represents an essential prokaryotic
CC cellular proliferation protein. Note: The sequence data for this patent
CC did not form part of the printed specification, but was obtained in
CC electronic format directly from WIPO at

XX
XX New polynucleotides for the identification and development of
PT antibiotics, comprise sequences of antisense nucleic acids.
XX
XX Example 3; SEQ ID NO 5797; 511pp; English.
XX
XX The invention relates to antisense inhibitors of genes essential to
CC prokaryotic cellular proliferation, their use in identifying the genes,
CC their use in the discovery of novel antibiotics, the essential genes
CC themselves and the encoded proteins. The prokaryotes used are Escherichia
CC coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae,
CC Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also
CC useful for the identification of potential new targets for antibiotic
CC development. The antisense nucleic acids can also be used to identify
CC proteins used in proliferation, to express these proteins, and to obtain
CC antibodies capable of binding to the expressed proteins. The proteins can
CC be used to screen compounds in rational drug discovery programmes. The
CC antisense nucleic acid sequence is also useful to screen for homologous
CC nucleic acids which are required for cell proliferation in a wide variety
CC of organisms. The present sequence represents an essential prokaryotic

 PT Identifying, isolating and producing hyperimmune serum-reactive antigens
 PT from a pathogen, for preparing vaccine or medicament for treating or
 PT preventing e.g. staphylococcal infections, comprises providing antibody
 PT preparation.
 PT
 XX Example 7; Page 157; 252pp; English.
 PS
 XX The invention relates to a novel method for identifying, isolating and
 CC producing hyperimmune serum-reactive antigens from a pathogen, tumour,
 CC allergen, a tissue or host prone to auto-immunity, where the antigens are
 CC used in a vaccine, comprises providing antibody preparation from a plasma
 CC pool of a type of animal, or individual sera with antibodies against the
 CC specific pathogen, tumour, allergen, tissue or host prone to auto-
 CC immunity. The hyperimmune serum-reactive antigens comprising any of the
 CC 62 sequences of 53-261 amino acids fully defined in the specification,
 CC or their hyperimmune fragments are useful for the manufacture of a
 CC pharmaceutical preparation, particularly a vaccine against staphylococcal
 CC infections or colonisation against *S. aureus* or *S. epidermidis*. The
 CC preparation of antibodies is useful for the manufacture of a medicament
 CC for treating or preventing staphylococcal infections or colonisation
 CC against *S. aureus* or *S. epidermidis*. The antibody preparations may also
 CC be used for diagnostic and imaging purposes. Other conditions that can be
 CC treated include cancer, autoimmune diseases or infections caused by viral
 CC (e.g. HIV, hepatitis A, B or C), fungal or protozoan pathogens. This
 CC sequence represents a staphylococcal protein relating to the method for
 CC identifying and producing pathogen specific antigens of the invention

 PT
 XX Claim 1; SEQ ID NO 3554; 49pp; English.
 PS
 XX The invention relates to novel genes and encoded proteins from
 CC Staphylococcus aureus. A composition comprising the *S. aureus* protein, a
 CC nucleic acid encoding the protein, or an antibody to the protein, is
 CC useful as a pharmaceutical, particularly as a vaccine for treating or
 CC preventing infection due to Staphylococcus bacteria, specifically an
 CC infection caused by *S. aureus*. The composition is particularly useful for
 CC treating or preventing sepsis in a patient. The composition can also be
 CC used for diagnostics. The protein is also used in an assay for enzymatic
 CC studies and as a target for antibiotics. This sequence represents one of
 CC the novel *S. aureus* proteins of the invention

 PT

PS Claim 23; Page 3263-3267; 3271pp; English.

XX This sequence represents a *Staphylococcus aureus* protein sequence of the

CC invention. The DNA sequences encoding the *S. aureus* proteins are recorded

CC on a computer readable medium, preferably selected from a floppy or hard

CC disk, random access memory (RAM), read-only memory (ROM) or CD-ROM.

CC Homology searches using the *S. aureus* DNA sequences allows iterative

CC functions to be assigned so that protein-encoding or regulatory regions

CC of commercial, therapeutic or industrial importance can be obtained.

CC Specifically, sequences which are likely to encode antigens have been

CC identified and these polypeptides can be used in a vaccine composition

CC against *S. aureus* infection. The polypeptides can also be used in a kit

CC for the immunodetection of *S. aureus* in a sample. *S. aureus* is implicated

CC in numerous human diseases, including cellulitis, eyelid infections, food

CC poisoning, osteomyelitis, skin and surgical wound infections, scalded

CC skin syndrome, toxic shock syndrome, etc. Organisms transfected with the

CC DNA sequences can be used for recombinant production of the polypeptides.

CC The new DNA sequences (and their fragments) are useful as primers or

CC probes for isolating homologues of any of the 5191 *S. aureus* DNA sequences

CC contained on the computer readable medium

PT and as antiadherent agent in oral hygiene.
XX
XX
PS Claim 5; Page 26; 38pp; English.

CC The present sequence is the *S. aureus* fibronectin binding protein
CC polypeptide D2D3, which can be used to prevent adhesion of (e.g. gram
CC positive) bacteria, to extra-cellular matrix proteins on in-dwelling

CC	device, e.g. catheters or in wounds. D2D3 can also be used to prevent
CC	oral pathogens from binding to extra-cellular matrix proteins, in the
CC	oral cavity. D2D3 was found to be effective at inhibiting <i>S. aureus</i> 8325-
CC	4, and 120 adhesion to fibronectin coated PHEMA coverings, at a min.
CC	adhesion inhibitor concn. of 10 mcg/ml. D2D3 was derived from the D2
CC	and D3 regions of the <i>S. aureus</i> J2385 (NCIMB 40532) fibronectin binding
CC	protein

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

from Staphylococcus aureus: use of this peptide sequence in the
synthesis of biologically active peptides."
RL Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
CC -!- FUNCTION: The ability of bacteria to bind fibronectin has been
proposed as a virulence factor enabling bacteria to colonize wound
tissues and blood clots. Binding of plasma fibronectin to the
bacterial surface might block adhesion receptors on S.aureus, thus
representing an important defense mechanism against tissue
invasion.
CC -!- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
an amide bond (Potential).

 CC -1- FUNCTION: Decarboxylates L-threonine-O-3-phosphate to yield (R)-1-
 CC amino-2-propanol O-2-phosphate, the precursor for the linkage
 CC between the nucleotide loop and the cortin ring in cobalamin (By
 CC similarity).
 CC -1- CATALYTIC ACTIVITY: L-threonine O-3-phosphate = (R)-1-aminopropan-
 CC 2-yl phosphate + CO(2).
 CC -1- COFACTOR: Pyridoxal phosphate (By similarity).
 CC -1- PATHWAY: Adenosylcobalamin biosynthesis; conversion of
 CC adenosylcobyrinic acid to adenosylcobinamide.
 CC -1- SIMILARITY: Belongs to the class-II pyridoxal-phosphate-dependent
 CC aminotransferase family.

The invention relates to antibodies that bind to a fibronectin-binding domain of a fibronectin-binding protein, and inhibit binding of the protein to fibronectin. Also claimed are: (1) isolated peptides of a fibronectin-binding protein that do not bind to fibronectin; (2) fusion protein containing at least one peptide of a fibronectin-binding protein linked to a second amino acid sequence; (3) nucleic acid encoding the isolated peptide of (1). Antibodies, the isolated peptides of (1) and the nucleic acids are all useful for immunisation (active or passive) and (by inhibiting binding of bacteria to fibronectin) for preventing or treating infection in humans or other animals, particularly by staphylococci or

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65701-706 represent a series of
 CC synthetic peptides based on the D2 region of *S. aureus* fibronectin
 CC binding protein A. They were synthesised to contain mutations

 XX Example 2; Fig 8A-B; 130pp; English.
 PS
 CC The invention provides bovine herpes virus-2 (BHV-2) based vectors that
 CC comprise at least one cytokine-encoding DNA sequence. The expression of
 CC cytokines in mammals can up-regulate immune responses to the immunogens.
 CC The cytokine is selected from interleukins (IL), colony stimulating
 CC factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The
 CC BHV-2 based vector or recombinant virus can be used as vaccines. They can
 CC be used for preventing or treating a mucosal disease in a subject, e.g.
 CC ruminants, cattle, sheep, goats, dogs, cats, horses, or man, particularly
 CC mastitis in cows or breast cancers in humans. They can also be used for
 CC preventing or treating a stress-induced disease. The present sequence
 CC represents the binding domain of a previously published *S. aureus*
 CC fibronectin binding protein A (Fnba) sequence. The Fnba binding domain
 CC gene sequence FNBB, cloned for use in this invention has 97.8 percent
 CC identity when compared to the previously published Fnba and Fnbb gene
 CC sequences

Antibody that interacts with collagen binding domain of Staphylococcal

cna gene product - useful to prevent bacterial sepsis in animal infected

with Staphylococcus aureus.

Disclosure; Page 91; 143pp; English.

This protein comprises Staphylococcus aureus fibronectin-binding

microbial surface component regionising adhesive matrix molecule (MSCRAMM)

derivative pOD, plus a vector-derived N-terminal peptide. The invention

relates to claimed nucleic acid sequences (see AAT93436-38) encoding S.

aureus collagen binding protein (CBP) epitopes M17, M31 and M55 (see

AAW31552-54) that confer protection against S. aureus infection. CBP

protein and antigenic epitopes are contemplated for use in the treatment

of pathological infections, especially to prevent bacterial adhesion to

collagen. The epitopes are also contemplated for use in the preparation

of vaccines and as carrier proteins in vaccine formulations, as well as

in the formulation of compositions for the prevention of S. aureus

infection. PCR3 and pOD (see AAW31556) were used to raise anti-MSCRAMM

polyclonal antibodies used in passive immunisation against bovine

mastitis. (Updated on 25-MAR-2003 to correct PI field.) (Updated on 27-

AUG-2003 to correct OS field.)

Hybrid DNA encoding Staphylococcus aureus fibronectin binding protein -

useful for immunisation and topical application to prevent staphylococcal

infections.

Disclosure; Fig. 8A:1-8A:2; 23pp; English.

The S. aureus fibronectin binding protein may be included in a hybrid

protein. The protein may be used to immunise ruminants against

staphylococcal mastitis, pref. when given at 0.5-5 microg/kg, using 3

doses at 1-3 week intervals; and for topical applicn. to prevent wound

infection, pref. using isotonic saline soln. of concn. 25-250 microg/mg.

The DNA encoding the binding protein and the hybrid protein may be

immobilised on a carrier and used to diagnose staphylococcal infections.

 PT Identifying, isolating and producing hyperimmune serum-reactive antigens
 PT from a pathogen, for preparing vaccine or medicament for treating or
 PT preventing e.g. staphylococcal infections, comprises providing antibody
 PT preparation.
 PT
 PS Example 7; Page 157; 252pp; English.
 XX
 CC The invention relates to a novel method for identifying, isolating and
 CC producing hyperimmune serum-reactive antigens from a pathogen, tumour,
 CC allergen, a tissue or host prone to auto-immunity, where the antigens are
 CC used in a vaccine, comprises providing antibody preparation from a plasma
 CC pool of a type of animal, or individual sera with antibodies against the
 CC specific pathogen, tumour, allergen, tissue or host prone to auto-
 CC immunity. The hyperimmune serum-reactive antigens comprising any of the
 CC 62 sequences of 53-2261 amino acids fully defined in the specification,
 CC or their hyperimmune fragments are useful for the manufacture of a
 CC pharmaceutical preparation, particularly a vaccine against staphylococcal
 CC infections or colonisation against *S. aureus* or *S. epidermidis*. The
 CC preparation of antibodies is useful for the manufacture of a medicament
 CC for treating or preventing staphylococcal infections or colonisation
 CC against *S. aureus* or *S. epidermidis*. The antibody preparations may also
 CC be used for diagnostic and imaging purposes. Other conditions that can be
 CC treated include cancer, autoimmune diseases or infections caused by viral
 CC (e.g. HIV, hepatitis A, B or C), fungal or protozoan pathogens. This
 CC sequence represents a staphylococcal protein relating to the method for
 CC identifying and producing pathogen specific antigens of the invention

 PT *S. aureus*, e.g. sepsis.
 PT
 PS Claim 1; SEQ ID NO 3554; 49pp; English.
 XX
 CC The invention relates to novel genes and encoded proteins from
 CC Staphylococcus aureus. A composition comprising the *S. aureus* protein, a
 CC nucleic acid encoding the protein, or an antibody to the protein, is
 CC useful as a pharmaceutical, particularly as a vaccine for treating or
 CC preventing infection due to Staphylococcus bacteria, specifically an
 CC infection caused by *S. aureus*. The composition is particularly useful for
 CC treating or preventing sepsis in a patient. The composition can also be
 CC used for diagnostics. The protein is also used in an assay for enzymatic
 CC studies and as a target for antibiotics. This sequence represents one of
 CC the novel *S. aureus* proteins of the invention

 XX
 PT Prevention of adherence of oral pathogens in the oral cavity, partic.
 PT tooth surfaces - by application of a fibronectin binding protein or
 PT polypeptide or a monoclonal antibody or fragment against it.
 PS Claim 5; Page 32; 41pp; English.
 XX
 CC Adherence of oral pathogens, particularly to tooth surface, can be
 CC prevented by application of a fibronectin binding protein or polypeptide.
 CC The fibronectin binding protein or polypeptide is useful in the
 CC manufacture of oral hygiene compositions, eg. toothpaste, liquid
 CC dentifrice, mouthwash or lozenge. They are useful to prevent the plaque-
 CC related development of carious lesions, gingivitis, calculus or
 CC periodontal disease and to combat oral cavity infections, eg.
 CC candidiasis. They may also be useful in oral surgery e.g. in guided
 CC tissue regeneration procedures to prevent subsequent bacterial infection,
 CC and for irrigation of periodontal pockets. This sequence corresponds to
 CC amino acids 709-838 of the D1-D4 fibronectin binding domain of
 CC Staphylococcus aureus

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

RT from Staphylococcus aureus: use of this peptide sequence in the				
RT synthesis of biologically active peptides."				
RL Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).				
CC -1- FUNCTION: The ability of bacteria to bind fibronectin has been				
CC proposed as a virulence factor enabling bacteria to colonize wound				
CC tissues and blood clots. Binding of plasma fibronectin to the				
CC bacterial surface might block adhesion receptors on S.aureus, thus				
CC representing an important defense mechanism against tissue				
CC invasion.				
CC -1- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by				
CC an amide bond (Potential).

CC -1- FUNCTION: Decarboxylates L-threonine-O-3-phosphate to yield (R)-1-
CC amino-2-pyranol O-2-phosphate, the precursor for the linkage
CC between the nucleotide loop and the corrin ring in cobalamin (By
CC similarity).
CC -1- CATALYTIC ACTIVITY: L-threonine O-3-phosphate = (R)-1-(iminopropan-
CC 2-yl phosphate + CO(2).
CC -1- COFACTOR: Pyridoxal phosphate (By similarity).
CC -1- PATHWAY: Adenosylcobalamin biosynthesis; conversion of
CC adenosylcobyrinic acid to adenosylcobinamide.
CC -1- SIMILARITY: Belongs to the class-II pyridoxal-phosphate-dependent
CC aminotransferase family.

PS Example 8; Page 102; 201pp; English.
XX
CC The invention relates to antibodies that bind to a fibronectin-binding
CC domain of a fibronectin-binding protein, and inhibit binding of the
CC protein to fibronectin. Also claimed are: (1) isolated peptides of a
CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
CC protein containing at least one peptide of a fibronectin-binding protein
CC linked to a second amino acid sequence; (3) nucleic acid encoding the
CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
CC nucleic acids are all useful for immunisation (active or passive) and (by
CC inhibiting binding of bacteria to fibronectin) for preventing or treating
CC infection in humans or other animals, particularly by staphylococci or

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
CC mastitis in cattle, abortion in horses and many others. Since the
CC antibodies block binding of bacteria, they should be effective against
CC antibiotic-resistant strains, and may replace antibiotic therapy or
CC increase its effectiveness. Sequences AAW65701-706 represent a series of
CC synthetic peptides based on the D2 region of *S. aureus* fibronectin
CC binding protein A. They were synthesised to contain mutations

Antibody that interacts with collagen binding domain of Staphylococcal
cna gene product - useful to prevent bacterial sepsis in animal infected
with Staphylococcus aureus.

Disclosure; Page 91; 143pp; English.

This protein comprises Staphylococcus aureus fibronectin-binding
microbial surface component recognising adhesive matrix molecule (MSCRAMM)
derivative POD, plus a vector-derived N-terminal peptide. The invention
relates to claimed nucleic acid sequences (see AAT93436-38) encoding S.
aureus collagen binding protein (CBP) epitopes M17, M31 and M55 (see
AAW31552-54) that confer protection against S. aureus infection. CBP
protein and antigenic epitopes are contemplated for use in the treatment
of pathological infections, especially to prevent bacterial adhesion to
collagen. The epitopes are also contemplated for use in the preparation
of vaccines and as carrier proteins in vaccine formulations, as well as
in the formulation of compositions for the prevention of S. aureus
infection. pCF33 and POD (see AAW31556) were used to raise anti-MSCRAMM
polyclonal antibodies used in passive immunisation against bovine
mastitis. (Updated on 25-MAR-2003 to correct PI field.) (Updated on 27-
AUG-2003 to correct OS field.)

Hybrid DNA encoding Staphylococcus aureus fibronectin binding protein -
useful for immunisation and topical application to prevent staphylococcal
infections.

Disclosure; Fig. 8A:1-8A:2; 23pp; English.

The S. aureus fibronectin binding protein may be included in a hybrid
protein. The protein may be used to immunise ruminants against
staphylococcal mastitis, pref. when given at 0.5-5 microg/kg, using 3
doses at 1-3 week intervals; and for topical applic. to prevent wound
infection, pref. using isotonic saline soln. of concn. 25-250 microg/mg.
The DNA encoding the binding protein and the hybrid protein may be
immobilised on a carrier and used to diagnose staphylococcal infections.

 PT Identifying, isolating and producing hyperimmune serum-reactive antigens
 PT from a pathogen, for preparing vaccine or medicament for treating or
 PT preventing e.g. staphylococcal infections, comprises providing antibody
 PT preparation.
 PT
 PS Example 7; Page 157; 252pp; English.
 XX
 CC The invention relates to a novel method for identifying, isolating and
 CC producing hyperimmune serum-reactive antigens from a pathogen, tumour,
 CC allergen, a tissue or host prone to auto-immunity, where the antigens are
 CC used in a vaccine, comprises providing antibody preparation from a plasma
 CC pool of a type of animal, or individual sera with antibodies against the
 CC specific pathogen, tumour, allergen, tissue or host prone to auto-
 CC immunity. The hyperimmune serum-reactive antigens comprising any of the
 CC 62 sequences of 53-2261 amino acids fully defined in the specification,
 CC or their hyperimmune fragments are useful for the manufacture of a
 CC pharmaceutical preparation, particularly a vaccine against staphylococcal
 CC infections or colonisation against *S. aureus* or *S. epidermidis*. The
 CC preparation of antibodies is useful for the manufacture of a medicament
 CC for treating or preventing staphylococcal infections or colonisation
 CC against *S. aureus* or *S. epidermidis*. The antibody preparations may also
 CC be used for diagnostic and imaging purposes. Other conditions that can be
 CC treated include cancer, autoimmune diseases or infections caused by viral
 CC (e.g. HIV, hepatitis A, B or C), fungal or protozoan pathogens. This
 CC sequence represents a staphylococcal protein relating to the method for
 CC identifying and producing pathogen specific antigens of the invention

XX Claim 23; Page 3263-3267; 3271pp; English.
PS
XX This sequence represents a Staphylococcus aureus protein sequence of the
XX invention. The DNA sequences encoding the S.aureus proteins are recorded
XX on a computer readable medium, preferably selected from a floppy or hard
XX disk, random access memory (RAM), read-only memory (ROM) or CD-ROM.
XX Homology searches using the S.aureus DNA sequences allows putative
XX functions to be assigned so that protein-encoding or regulatory regions
XX of commercial, therapeutic or industrial importance can be contained.
XX Specifically, sequences which are likely to encode antigens have been
XX identified and these polypeptides can be used in a vaccine composition
XX against S.aureus infection. The polypeptides can also be used in a kit
XX for the immunodetection of S.aureus in a sample. S.aureus is implicated
XX in numerous human diseases, including cellulitis, eyelid infections, food
XX poisoning, osteomyelitis, skin and surgical wound infections, scaled
XX skin syndrome, toxic shock syndrome, etc. Organisms transformed with the
XX DNA sequences can be used for recombinant production of the polypeptides.
XX The new DNA sequences (and their fragments) are useful as primers or
XX probes for isolating homologues of any of the 5191 S.aureus DNA sequences
XX contained on the computer readable medium

XX PT Antibody that binds to fibronectin-binding protein, preventing its
XX binding to fibronectin - used to treat or prevent bacterial infection,
XX especially by Staphylococci and Streptococci.

XX Example 8; Page 102; 201pp; English.

The invention relates to antibodies that bind to a fibronectin-binding domain of a fibronectin-binding protein, and inhibit binding of the protein to fibronectin. Also claimed are: (1) isolated peptides of a fibronectin-binding protein that do not bind to fibronectin; (2) fusion protein containing at least one peptide of a fibronectin-binding protein linked to a second amino acid sequence; (3) nucleic acid encoding the isolated peptide of (1). Antibodies, the isolated peptides of (1) and the nucleic acids are all useful for immunisation (active or passive) and (by inhibiting binding of bacteria to fibronectin) for preventing or treating infection in humans or other animals, particularly by staphylococci or

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAM65701-706 represent a series of
 CC synthetic peptides based on the D2 region of *S. aureus* fibronectin
 CC binding protein A. They were synthesised to contain mutations

PT New bovine herpes virus-2 vectors.

XX Example 2; Fig 8A-B; 130pp; English.

XX The invention provides bovine herpes virus-2 (BHV-2) based vectors that
 CC comprise at least one cytokine-encoding DNA sequence. The expression of
 CC cytokines in mammals can up-regulate immune responses to the immunogens.
 CC The cytokine is selected from interleukins (IL), colony stimulating
 CC factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The
 CC BHV-2 based vector or recombinant virus can be used as vaccines. They can
 CC be used for preventing or treating a mucosal disease in a subject, e.g.
 CC ruminants, cattle, sheep, goats, dogs, cats, horses, or man, particularly
 CC mastitis in cows or breast cancers in humans. They can also be used for
 CC preventing or treating a stress-induced disease. The present sequence
 CC represents the binding domain of a previously published *S. aureus*
 CC fibronectin binding protein A (FnBA) sequence. The FnB binding domain
 CC gene sequence FnNB, cloned for use in this invention has 97.8 percent
 CC identity when compared to the previously published FnBA and FnBB gene
 CC sequences

This protein comprises Staphylococcus aureus fibronectin-binding

microbial surface component region; sepsis; infection; MSCRAMM)

derivative POD, plus a vector-derived N-terminal peptide. The invention

relates to claimed nucleic acid sequences (see AA93336-38) encoding S.

aureus collagen binding protein (CBP) epitopes M17, M31 and M55 (see

AAW31552-54) that confer protection against S. aureus infection. CBP

protein and antigenic epitopes are contemplated for use in the treatment

of pathological infections, especially to prevent bacterial adhesion to

collagen. The epitopes are also contemplated for use in the preparation

of vaccines and as carrier proteins in vaccine formulations, as well as

in the formulation of compositions for the prevention of S. aureus

infection. pCRf33 and pOD (see AAW31556) were used to raise anti-MSCRAMM

polyclonal antibodies used in passive immunisation against bovine

mastitis. (Updated on 25-MAR-2003 to correct PI field.) (Updated on 27-

AUG-2003 to correct OS field.)

Hybrid DNA encoding Staphylococcus aureus fibronectin binding protein -

useful for immunisation and topical application to prevent staphylococcal

infections.

Disclousure; Fig. 8A:1-8A:2; 23pp; English.

The S.aureus fibronectin binding protein may be included in a hybrid

protein. The protein may be used to immunise ruminants against

staphylococcal mastitis, pref. when given at 0.5-5 microg/kg, using 3

doses at 1-3 week intervals; and for topical applicn. to prevent wound

infection, pref. using isotonic saline soln. of concn. 25-250 microg/mg.

The DNA encoding the binding protein and the hybrid protein may be

immobilised on a carrier and used to diagnose staphylococcal infections.

 PT Identifying, isolating and producing hyperimmune serum-reactive antigens
 PT from a pathogen, for preparing vaccine or medicament for treating or
 PT preventing e.g. staphylococcal infections, comprises providing antibody
 PT preparation.
 PS
 XX Example 7; Page 157; 252pp; English.
 CC The invention relates to a novel method for identifying, isolating and
 CC producing hyperimmune serum-reactive antigens from a pathogen, tumour,
 CC allergen, a tissue or host prone to auto-immunity, where the antigens are
 CC used in a vaccine, comprises providing antibody preparation from a plasma
 CC pool of a type of animal, or individual sera with antibodies against the
 CC specific pathogen, tumour, allergen, tissue or host prone to auto-
 CC immunity. The hyperimmune serum-reactive antigens comprising any of the
 CC 62 sequences of 53-2261 amino acids fully defined in the specification,
 CC or their hyperimmune fragments are useful for the manufacture of a
 CC pharmaceutical preparation, particularly a vaccine against staphylococcal
 CC infections or colonisation against *S. aureus* or *S. epidermidis*. The
 CC preparation of antibodies is useful for the manufacture of a medicament
 CC for treating or preventing staphylococcal infections or colonisation
 CC against *S. aureus* or *S. epidermidis*. The antibody preparations may also
 CC be used for diagnostic and imaging purposes. Other conditions that can be
 CC treated include cancer, autoimmune diseases or infections caused by viral
 CC (e.g. HIV, hepatitis A, B or C), fungal or protozoan pathogens. This
 CC sequence represents a staphylococcal protein relating to the method for
 CC identifying and producing pathogen specific antigens of the invention

 PT *S. aureus*, e.g. sepsis.
 PS
 XX Claim 1; SEQ ID NO 3554; 49pp; English.
 CC The invention relates to novel genes and encoded proteins from
 CC Staphylococcus aureus. A composition comprising the *S. aureus* protein, a
 CC nucleic acid encoding the protein, or an antibody to the protein, is
 CC useful as a pharmaceutical, particularly as a vaccine for treating or
 CC preventing infection due to Staphylococcus bacteria, specifically an
 CC infection caused by *S. aureus*. The composition is particularly useful for
 CC treating or preventing sepsis in a patient. The composition can also be
 CC used for diagnostics. The protein is also used in an assay for enzymatic
 CC studies and as a target for antibiotics. This sequence represents one of
 CC the novel *S. aureus* proteins of the invention

 PT *S. aureus* vaccines.
 XX

XX Claim 23; Page 3263-3267; 3271pp; English.
 XX This sequence represents a Staphylococcus aureus protein sequence of the
 CC invention. The DNA sequences encoding the S. aureus proteins are recorded
 CC on a computer readable medium, preferably selected from a floppy or hard
 CC disk, random access memory (RAM), read-only memory (ROM) or CD-ROM.
 CC Homology searches using the S. aureus DNA sequences allows putative
 CC functions to be assigned so that protein-encoding or regulatory regions
 CC of commercial, therapeutic or industrial importance can be obtained.
 CC Specifically, sequences which are likely to encode antigens have been
 CC identified and these polypeptides can be used in a vaccine composition
 CC against S. aureus infection. The polypeptides can also be used in a kit
 CC for the immunodetection of S. aureus in a sample. S. aureus is implicated
 CC in numerous human diseases, including cellulitis, eyelid infections, food
 CC poisoning, osteomyelitis, skin and surgical wound infections, scalded
 CC skin syndrome, toxic shock syndrome, etc. Organisms transformed with the
 CC DNA sequences can be used for recombinant production of the polypeptides.
 CC The new DNA sequences (and their fragments) are useful as primers or
 CC probes for isolating homologues of any of the 5191 S. aureus DNA sequences
 CC contained on the computer readable medium

 PS
 XX Claim 5; Page 32; 41pp; English.
 XX
 CC Adherence of oral pathogens, particularly to tooth surfaces, can be
 CC prevented by application of a fibronectin binding protein or polypeptide.
 CC The fibronectin binding protein or polypeptide is useful in the
 CC manufacture of oral hygiene compositions, eg. toothpaste, liquid
 CC dentifrice, mouthwash or lozenge. They are useful to prevent the plaque-
 CC related development of carious lesions, gingivitis, calculus or
 CC periodontal disease and to combat oral cavity infections, eg.
 CC candidiasis. They may also be useful in oral surgery e.g. in guided
 CC tissue regeneration procedures to prevent subsequent bacterial infection,
 CC and for irrigation of periodontal pockets. This sequence corresponds to
 CC amino acids 709-838 of the D1-D4 fibronectin binding domain of
 CC Staphylococcus aureus

PT

PT

PS Example 9, Page 109; 201PP; English.
XX

XX The invention relates to antibodies that bind to a fibronectin-binding
XX domain of a fibronectin-binding protein, and inhibit binding of the
XX protein to fibronectin. Also claimed are: (1) isolated peptides of a
XX fibronectin-binding protein that do not bind to fibronectin; (2) fusion
XX protein containing at least one peptide of a fibronectin-binding protein
XX linked to a second amino acid sequence; (3) nucleic acid encoding the
XX isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
XX nucleic acids are all useful for immunisation (active or passive) and (by
XX inhibiting binding of bacteria to fibronectin) for preventing or treating
XX infection in humans or other animals, particularly by staphylococci or

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. The present sequence is shown in the
 CC specification

PT Increasing the level of TH1-type responses to molecules, used to treat
 PT infectious diseases, allergies and cancer, comprises conjugating the
 PT molecule to a plant virus.

PS Disclosure; Page 56; 89pp; English.

CC The present invention relates to a method for increasing the level of a
 CC TH1-type immune response to a molecule. The method comprising conjugating
 CC the molecule to a heterologous peptide expressed by a plant virus, and
 CC administering the conjugate to an animal. The method is useful for
 CC treating infectious diseases, allergies and cancer, by administering
 CC appropriate antigens conjugated to a plant virus. The present sequence is
 CC a peptide fragment of the fibronectin-binding protein, FnBP, of
 CC Staphylococcus aureus. This peptide was used to generate a chimeric virus
 CC particle of coxsackie B virus (CPMV) for use in the present invention

PT Monoclonal antibody for treating or preventing staphylococcal infections

XX binds specified fibronectin binding protein from Staphylococcus aureus.

XX Claim 10; SEQ ID NO 1; 12pp; English.

PS The invention relates to a new monoclonal antibody that binds fibronectin

CC binding proteins from Staphylococcus aureus, including fibronectin

CC binding protein A (FnBP) and fibronectin binding protein B (FnBPB). The

CC antibody is useful in treating, preventing or diagnosing staphylococcal

CC infections in a human or animal. The antibody is capable of recognising

CC Staphylococcus aureus with high affinity. It also inhibits binding of

CC staphylococcal bacteria to fibronectin. This sequence represents an FnBPB

CC D2 peptide of the invention.

 CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
 CC protein containing at least one peptide of a fibronectin-binding protein
 CC linked to a second amino acid sequence; (3) nucleic acid encoding the
 CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
 CC nucleic acids are all useful for immunisation (active or passive) and (by
 CC inhibiting binding of bacteria to fibronectin) for preventing or treating
 CC infection in humans or other animals, particularly by staphylococci or
 CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65701-706 represent a series of
 CC synthetic peptides based on the D2 region of S. aureus fibronectin
 CC binding protein A. They were synthesised to contain mutations

Antibody that binds to fibronectin-binding protein, preventing its

binding to fibronectin - used to treat or prevent bacterial infection,

especially by Staphylococci and Streptococci.

Example 2; Page 92; 201pp; English.

The invention relates to antibodies that bind to a fibronectin-binding

domain of a fibronectin-binding protein, and inhibit binding of the

protein to fibronectin. Also claimed are: (1) isolated peptides of a

fibronectin-binding protein that do not bind to fibronectin; (2) fusion

protein containing at least one peptide of a fibronectin-binding protein

linked to a second amino acid sequence; (3) nucleic acid encoding the

isolated peptide of (1). Antibodies, the isolated peptides of (1) and the

nucleic acids are all useful for immunisation (active or passive) and (by

inhibiting binding of bacteria to fibronectin) for preventing or treating

infection in humans or other animals, particularly by staphylococci or

streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,

CC mastitis in cattle, abortion in horses and many others. Since the

CC antibodies block binding of bacteria, they should be effective against

CC antibiotic-resistant strains, and may replace antibiotic therapy or

increase its effectiveness. Sequences AAW65659-68 represent synthetic

epitopes from the fibronectin binding domains DU and DI-D4 of the S.

Staphylococcus aureus fibronectin binding protein D2D3 polypeptide -

useful for combating infection at wound sites, surgical implants, etc.

and as antiadherent agent in oral hygiene.

Claim 5; Page 26; 38pp; English.

The present sequence is the S. aureus fibronectin binding protein

polypeptide D2D3, which can be used to prevent adhesion of (e.g. gram

positive) bacteria, to extra-cellular matrix proteins on in-dwelling

devices, e.g. catheters or in wounds. D2D3 can also be used to prevent

oral pathogens from binding to extra-cellular matrix proteins, in the

oral cavity. D2D3 was found to be effective at inhibiting S. aureus 8325-

4, and 120 adhesion to fibronectin coated PMMA coverslips, at a min.

adhesion inhibitor concn. of 10 microg/ml. D2D3 was derived from the D2

and D3 regions of the S. aureus J2385 (NCIMB 40532) fibronectin binding

protein

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

RT "Nucleotide sequence of the gene for a fibronectin-binding protein
RT from Staphylococcus aureus: use of this peptide sequence in the
RT synthesis of biologically active peptides."
RL Proc. Natl. Acad. Sci. U.S.A. 86:769-703(1989).
CC -1- FUNCTION: The ability of bacteria to bind fibronectin has been
CC proposed as a virulence factor enabling bacteria to colonize wound
CC tissues and blood clots. Binding of plasma fibronectin to the
CC bacterial surface might block adhesion receptors on S.aureus, thus
CC representing an important defense mechanism against tissue
CC invasion.
CC -1- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
CC an amide bond (Potential).

XX WPI; 1998-413816/35.
XX
XX
XX The invention relates to antibodies that bind to a fibrinectin-binding
XX domain of a fibrinectin-binding protein, and inhibit binding of the
XX protein to fibrinectin. Also claimed are: (1) isolated peptides of a
XX fibrinectin-binding protein that do not bind to fibrinectin; (2) fusion
XX protein containing at least one peptide of a fibrinectin-binding protein
XX linked to a second amino acid sequence; (3) nucleic acid encoding the
XX isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
XX nucleic acids are all useful for immunisation (active or passive) and (by
XX inhibiting binding of bacteria to fibrinectin) for preventing or treating
XX infection in humans or other animals, particularly by staphylococci or

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65719-41 and AAW65658 represent
 CC peptides which were synthesised to span the D1 motif and the N-terminal
 CC 18 amino acids of D2, with each peptide overlapping by eight amino acids
 CC with the previous sequence

PT Hybrid DNA encoding Staphylococcus aureus fibronectin binding protein -
 PT useful for immunisation and topical application to prevent staphylococcal
 PT infections.

PS Claim 11; Page 12; 23pp; English.

CC The peptide has fibronectin binding ability. It is useful for immunising
 CC ruminants against staphylococcal mastitis, pref. when used at 0.5-5
 CC micrograms/kg, using 3 doses given at 1-3 week intervals; for topical
 CC application to prevent wound infection, using an isotonic saline soln. of
 CC concn. 25-250 micrograms/ml; and, when immobilised on a carrier, for
 CC diagnosing staphylococcal infections. (Updated on 25-MAR-2003 to correct
 CC PF field.) (Updated on 25-MAR-2003 to correct PA field.)

PT Hybrid DNA encoding Staphylococcus aureus fibronectin binding protein -
 PT useful for immunisation and topical application to prevent staphylococcal
 PT infections.
 PS Claim 11; Page 12; 23pp; English.

CC The S.aureus fibronectin binding protein may be included in a hybrid
 CC protein. The protein may be used to immunise ruminants against
 CC staphylococcal mastitis, pref. when given at 0.5-5 microg/kg, using 3
 CC doses at 1-3 week intervals; and for topical applicn. to prevent wound
 CC infection, pref. using isotonic saline soln. of concn. 25-250 microg/mg.
 CC The DNA encoding the binding protein and the hybrid protein may be
 CC immobilised on a carrier and used to diagnose staphylococcal infections.
 CC (Updated on 25-MAR-2003 to correct PA field.)

XX PS
XX PT Antibody that binds to fibronectin-binding protein, preventing its
XX PT binding to fibronectin - used to treat or prevent bacterial infection,
XX PT especially by Staphylococci and Streptococci.
XX PS Example 8, Page 102; 201pp; English.
XX CC
XX CC The invention relates to antibodies that bind to a fibronectin-binding
XX CC domain of a fibronectin-binding protein, and inhibit binding of the
XX CC protein to fibronectin. Also claimed are: (1) isolated peptides of a
XX CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
XX CC protein containing at least one peptide of a fibronectin-binding protein
XX CC linked to a second amino acid sequence; (3) nucleic acid encoding the
XX CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
XX CC isolated acids are all useful for immunisation (active or passive) and (by
XX CC inhibiting binding of bacteria to fibronectin) for preventing or treating
XX CC infection in humans or other animals, particularly by staphylococci or
XX CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
XX CC mastitis in cattle, abortion in horses and many others. Since the
XX CC antibodies block binding of bacteria, they should be effective against
XX CC antibiotic-resistant strains, and may replace antibiotic therapy or
XX CC increase its effectiveness. Sequences AAM65691-700 represent a series of
XX CC synthetic peptides based on the D1 region of S. aureus fibronectin
XX CC binding protein A. They were synthesised to contain mutations

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

RT from Staphylococcus aureus: use of this peptide sequence in the
RT synthesis of biologically active peptides.";
RL Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
CC -1- FUNCTION: The ability of bacteria to bind fibronectin has been
CC proposed as a virulence factor enabling bacteria to colonize wound
CC tissues and blood clots. Binding of plasma fibronectin to the
CC bacterial surface might block adhesion receptors on S.aureus, thus
CC representing an important defense mechanism against tissue
CC invasion.
CC -1- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
CC an amide bond (Potential).

CC -1- FUNCTION: Calcium-regulated non-lysosomal thiol-protease which
CC catalyze limited proteolysis of substrates involved in
CC cytoskeletal remodeling and signal transduction.
CC -1- CATALYTIC ACTIVITY: Broad endopeptidase specificity.
CC -1- SUBUNIT: Heterodimer of a large (catalytic) and a small
CC (regulatory) subunit.
CC -1- TISSUE SPECIFICITY: Highest expression in testis.
CC -1- SIMILARITY: Belongs to the peptidase C2 family.
CC -1- SIMILARITY: Contains 1 calpain catalytic domain.
CC -1- SIMILARITY: Contains 2 EF-hand calcium-binding domains.

Antibody that binds to fibronec-binding protein, preventing its
binding to fibronec - used to treat or prevent bacterial infection,
especially by Staphylococci and Streptococci.
Example 9; Page 109; 201PP; English.
The invention relates to antibodies that bind to a fibronec-binding
domain of a fibronec-binding protein, and inhibit peptides of the
protein to fibronec. Also claimed are: (1) isolated peptides of a
fibronec-binding protein that do not bind to fibronec; (2) fusion
protein containing at least one peptide of a fibronec-binding protein
linked to a second amino acid sequence; (3) nucleic acid encoding the
isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
nucleic acids are all useful for immunisation (active or passive) and (by
inhibiting binding of bacteria to fibronec) for preventing or treating
infection in humans or other animals, particularly by staphylococci or

CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65719-41 and AAW35658 represent
 CC peptides which were synthesised to span the D1 motif and the N-terminal
 CC 18 amino acids of D2, with each peptide overlapping by eight amino acids
 CC with the previous sequence

XX Antibody that binds to fibronectin-binding protein, preventing its

XX binding to fibronectin - used to treat or prevent bacterial infection,

XX especially by Staphylococci and Streptococci.

XX Example 8; Page 104; 201pp; English.

XX The invention relates to antibodies that bind to a fibronectin-binding

XX domain of a fibronectin-binding protein, and inhibit binding of the

XX protein to fibronectin. Also claimed are: (1) isolated peptides of a

XX fibronectin-binding protein that do not bind to fibronectin (2) fusion

XX protein containing at least one peptide of a fibronectin-binding protein

XX linked to a second amino acid sequence; (3) nucleic acid encoding the

XX isolated peptide of (1). Antibodies, the isolated peptides of (1) and the

XX nucleic acids are all useful for immunisation (active or passive) and (by

XX inhibiting binding of bacteria to fibronectin) for preventing or treating

XX infection in humans or other animals, particularly by staphylococci or

XX streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,

XX mastitis in cattle, abortion in horses and many others. Since the

XX antibodies block binding of bacteria, they should be effective against

XX antibiotic-resistant strains, and may replace antibiotic therapy or

XX increase its effectiveness. The present sequence is shown in the

XX specification

 XX Claim 5; Page 32; 41pp; English.
 PS
 XX Adherence of oral pathogens, particularly to tooth surfaces, can be
 CC prevented by application of a fibronectin binding protein or polypeptide.
 CC The fibronectin binding protein or polypeptide is useful in the
 CC manufacture of oral hygiene compositions, eg. toothpaste, liquid
 CC dentifrice, mouthwash or lozenge. They are useful to prevent the plaque-
 CC related development of carious lesions, gingivitis, calculus or
 CC periodontal disease and to combat oral cavity infections, e.g.
 CC candidiasis. They may also be useful in oral surgery e.g. in guided
 CC tissue regeneration procedures to prevent subsequent bacterial infection,
 CC and for irrigation of periodontal pockets. This sequence corresponds to
 CC amino acids 709-838 of the D1-D4 fibronectin binding domain of
 CC Staphylococcus aureus

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

RT "Nucleotide sequence of the gene for a fibronectin-binding protein
RT from Staphylococcus aureus: use of this peptide sequence in the
RT synthesis of biologically active peptides.";
RL Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
CC -1- FUNCTION: The ability of bacteria to bind fibronectin has been
CC proposed as a virulence factor enabling bacteria to colonize wound
CC tissues and blood clots. Binding of plasma fibronectin to the
CC bacterial surface might block adhesion receptors on S.aureus, thus
CC representing an important defense mechanism against tissue
CC invasion.
CC -1- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
CC an amide bond (Potential).

XX PT Antibody that binds to fibronectin-binding protein, preventing its
XX PT binding to fibronectin - used to treat or prevent bacterial infection,
XX PT especially by Staphylococci and Streptococci.
XX PS Example 2; Page 92; 201pp; English.
XX CC The invention relates to antibodies that bind to a fibronectin-binding
XX CC domain of a fibronectin-binding protein, and inhibit binding of the
XX CC protein to fibronectin. Also claimed are: (1) isolated peptides of a
XX CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
XX CC protein containing at least one peptide of a fibronectin-binding protein
XX CC linked to a second amino acid sequence; (3) nucleic acid encoding the
XX CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
XX CC nucleic acids are all useful for immunisation (active or passive) and (by
XX CC inhibiting binding of bacteria to fibronectin) for preventing or treating
XX CC infection in humans or other animals, particularly by staphylococci or
XX CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
XX CC mastitis in cattle, abortion in horses and many others. Since the
XX CC antibodies block binding of bacteria, they should be effective against
XX CC antibiotic-resistant strains, and may replace antibiotic therapy or
XX CC increase its effectiveness. Sequences AAM6569-68 represent synthetic
XX CC epitopes from the fibronectin binding domains DU and DI-D4 of the S.

 CC protein to fibronectin. Also claimed are: (1) isolated peptides of a
 CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
 CC protein containing at least one peptide of a fibronectin-binding protein
 CC linked to a second amino acid sequence; (3) nucleic acid encoding the
 CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
 CC nucleic acids are all useful for immunisation (active or passive) and (b)
 CC inhibiting binding of bacteria to fibronectin) for preventing or treating
 CC infection in humans or other animals, particularly by staphylococci or
 CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65691-700 represent a series of
 CC synthetic peptides based on the D1 region of S. aureus fibronectin
 CC binding protein A. They were synthesised to contain mutations

 PT Antibody that binds to fibronectin-binding protein, preventing its
 PT binding to fibronectin - used to treat or prevent bacterial infection,
 PT especially by Staphylococci and Streptococci.
 XX
 PS Example 8; Page 104; 201pp; English.

XX The invention relates to antibodies that bind to a fibronectin-binding
 CC domain of a fibronectin-binding protein, and inhibit binding of the
 CC protein to a fibronectin. Also claimed are: (1) isolated peptides of a
 CC fibronectin-binding protein that do not bind to fibronectin; (2) fusion
 CC protein containing at least one peptide of a fibronectin-binding protein
 CC linked to a second amino acid sequence; (3) nucleic acid encoding the
 CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
 CC nucleic acids are all useful for immunisation (active or passive) and (by
 CC inhibiting binding of bacteria to fibronectin) for preventing or treating
 CC infection in humans or other animals, particularly by staphylococci or
 CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. The present sequence is shown in the
 CC specification

PT Prevention of adherence of oral pathogens in the oral cavity, partic.
PT tooth surfaces - by application of a fibronectin binding protein or
PT polypeptide or a monoclonal antibody or fragment against it.

PS Claim 5; Page 32; 41pp; English.

CC Adherence of oral pathogens, particularly to tooth surfaces, can be
CC prevented by application of a fibronectin binding protein or polypeptide.
CC The fibronectin binding protein or polypeptide is useful in the
CC manufacture of oral hygiene compositions, eg. toothpaste, liquid
CC dentifrice, mouthwash or lozenge. They are useful to prevent the plaque-
CC related development of carious lesions, gingivitis, calculus or
CC periodontal disease and to combat oral cavity infections, e.g.
CC candidiasis. They may also be useful in oral surgery e.g. in guided
CC tissue regeneration procedures to prevent subsequent bacterial infection,
CC and for irrigation of periodontal pockets. This sequence corresponds to
CC amino acids 709-838 of the D1-D4 fibronectin binding domain of
CC Staphylococcus aureus

 XX
 XX The invention provides bovine herpes virus-2 (BHV-2) based vectors that

CC comprise at least one cytokine-encoding DNA sequence. The expression of
 CC cytokines in mammals can up-regulate immune responses to the immunogens.
 CC The cytokine is selected from interleukins (IL), colony stimulating
 CC factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The
 CC BHV-2 based vector or recombinant virus can be used as vaccines. They can
 CC be used for preventing or treating a mucosal disease in a subject, e.g.
 CC ruminants, cattle, sheep, goats, dogs, cats, horses, or man, particularly
 CC mastitis in cows or breast cancers in humans. They can also be used for
 CC preventing or treating a stress-induced disease. The present sequence
 CC represents a S. aureus fibronectin binding protein binding domain
 CC sequence FnBAB, the gene cloned for use in this invention. The gene has
 CC 97.8 percent identity when compared to the previously published sequences
 CC FnBA and FnBB

Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

 RA Anantharamiah G.M., Hoeck M., Lindberg M.;
 RT "Nucleotide sequence of the gene for a fibronectin-binding protein
 from *Staphylococcus aureus*: use of this peptide sequence in the
 RT synthesis of biologically active peptides.";
 RL Proc. Natl. Acad. Sci. U.S.A. 86:699-703(1989).
 CC -1- FUNCTION: The ability of bacteria to bind fibronectin has been
 CC proposed as a virulence factor enabling bacteria to colonize wound
 CC tissues and blood clots. Binding of plasma fibronectin to the
 CC bacterial surface might block adhesion receptors on *S. aureus*, thus
 CC representing an important defense mechanism against tissue
 CC invasion.
 CC -1- SUBCELLULAR LOCATION: Attached to the cell wall peptidoglycan by
 CC an amide bond (Potential).
 CC This SWISS-PROT entry is copyright. It is produced through a collaboration
 CC between the Swiss Institute of Bioinformatics and the EMBL outstation -

CC	The invention relates to antibodies that bind to a fibronectin-binding
CC	domain of a fibronectin-binding protein, and inhibit binding of the
CC	protein to fibronectin. Also claimed are: (1) isolated peptides of a
CC	fibronectin-binding protein that do not bind to fibronectin; (2) fusion
CC	protein containing at least one peptide of a fibronectin-binding protein
CC	linked to a second amino acid sequence; (3) nucleic acid encoding the
CC	isolated peptide of (1). Antibodies, the isolated peptides cf (1) and the
CC	nucleic acids are all useful for immunisation (active or passive) and (by
CC	inhibiting binding of bacteria to fibronectin) for preventing or treating
CC	infection in humans or other animals, particularly by staphylococci or
CC	streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
CC	mastitis in cattle, abortion in horses and many others. Since the
CC	antibodies block binding of bacteria, they should be effective against
CC	antibiotic-resistant strains, and may replace antibiotic therapy or
CC	increase its effectiveness. The present sequence is shown in the

 XX Antibody that binds to fibronection-binding protein, preventing its
 PT binding to fibronection - used to treat or prevent bacterial infection,
 PT especially by Staphylococci and Streptococci.
 PT
 XX Example 2; Page 92; 201pp; English.
 PS
 XX The invention relates to antibodies that bind to a fibronection-binding
 CC domain of a fibronection-binding protein, and inhibit binding of the
 CC protein to fibronection. Also claimed are: (1) isolated peptides of a
 CC fibronection-binding protein that do not bind to fibronection; (2) fusion
 CC protein containing at least one peptide of a fibronection-binding protein
 CC linked to a second amino acid sequence; (3) nucleic acid encoding the
 CC isolated peptide of (1). Antibodies, the isolated peptides of (1) and the
 CC nucleic acids are all useful for immunisation (active or passive) and (by
 CC inhibiting binding of bacteria to fibronection) for preventing or treating
 CC infection in humans or other animals, particularly by staphylococci or
 CC streptococci, e.g. meningitis, otitis media, pneumonia, endocarditis,
 CC mastitis in cattle, abortion in horses and many others. Since the
 CC antibodies block binding of bacteria, they should be effective against
 CC antibiotic-resistant strains, and may replace antibiotic therapy or
 CC increase its effectiveness. Sequences AAW65659-68 represent synthetic
 CC epitopes from the fibronection binding domains DU and DI-D4 of the S.

 PS Example 2; Fig 8A-B; 130pp; English.
 CC The invention provides bovine herpes virus-2 (BHV-2) based vectors that
 CC comprise at least one cytokine-encoding DNA sequence. The expression of

CC cytokines in mammals can up-regulate immune responses to the immunogens.
 CC The cytokine is selected from interleukins (IL), colony stimulating
 CC factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The
 CC BHV-2 based vector or recombinant virus can be used as vaccines. They can
 CC be used for preventing or treating a mucosal disease in a subject, e.g.
 CC ruminants, cattle, sheep, goats, dogs, cats, horses, or man, particularly
 CC mastitis in cows or breast cancers in humans. They can also be used for
 CC preventing or treating a stress-induced disease. The present sequence
 CC represents a S. aureus fibronectin binding protein binding domain
 CC sequence FnBAB, the gene cloned for use in this invention. The gene has
 CC 97.8 percent identity when compared to the previously published sequences
 CC FnBA and FnBB

 PT New bovine herpes virus-2 vectors.
 XX
 PS Example 2; Fig 8A-B; 130pp; English.
 CC The invention provides bovine herpes virus-2 (BHV-2) based vectors that
 CC comprise at least one cytokine-encoding DNA sequence. The expression of
 CC cytokines in mammals can up-regulate immune responses to the immunogens.
 CC The cytokine is selected from interleukins (IL), colony stimulating
 CC factors (CSF), interferons (IFN) and tumour necrosis factors (TNF). The
 CC BHV-2 based vector or recombinant virus can be used as vaccines. They can
 CC be used for preventing or treating a mucosal disease in a subject, e.g.
 CC ruminants, cattle, sheep, goats, dogs, cats, horses, or man, particularly
 CC mastitis in cows or breast cancers in humans. They can also be used for
 CC preventing or treating a stress-induced disease. The present sequence
 CC represents the binding domain of a previously published S. aureus
 CC fibronectin binding protein B (FnBB) sequence. The FnB binding domain

CC gene sequence FNAB, cloned for use in this invention has 9'.8 percent
CC identity when compared to the previously published FNBA and FNBB gene
CC sequences

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

REGISTRATION NUMBER: 41,071
REFERENCE/DOCKET NUMBER: TAMK:189
TELECOMMUNICATION INFORMATION:
TELEPHONE: 512-418-3000
TELEFAX: 512-474-7577
INFORMATION FOR SEQ ID NO: 57:
SEQUENCE CHARACTERISTICS:
LENGTH: 39 amino acids
TYPE: amino acid
STRANDEDNESS:
TOPOLOGY: linear
US-09-010-317-57

Query Match 100.0%; Score 52; DB 4; Length 39;
Best Local Similarity 100.0%; Pred. No. 0.03;
Matches 10; Conservative 0; Mismatches 0; Indels 0; Gaps 0;

QY 1 SPEEDTEBDK 10
DB 7 SPEEDTEBDK 16

RESULT 10
US-08-259-000-3
Sequence 3, Application US/08259000
Patent No. 5571514
GENERAL INFORMATION:
APPLICANT: HOOK, Magnus
APPLICANT: LINDBERG, Martin Kjell
APPLICANT: SIGNAS, Lars Christer
APPLICANT: MADSTROM, Torrel Mikael
APPLICANT: FROMAN, Gunnar
TITLE OF INVENTION: FIBRONECTIN BINDING PROTEIN AS WELL AS
TITLE OF INVENTION: ITS PREPARATION
NUMBER OF SEQUENCES: 4
CORRESPONDENCE ADDRESS:
ADDRESSEE: Burns, Doane, Swecker & Mathis
STREET: P.O. Box 1404
CITY: Alexandria
STATE: Virginia
COUNTRY: United States
ZIP: 22313-1404
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/259,000
FILING DATE: 13-JUN-1994
CLASSIFICATION: 435
PRIOR APPLICATION DATA:
APPLICATION NUMBER: SE 8702272-9
FILING DATE: 01-JUN-1987
ATTORNEY/AGENT INFORMATION:
NAME: Meuth, Donna M
REGISTRATION NUMBER: 36,607
REFERENCE/DOCKET NUMBER: 012885-062
TELECOMMUNICATION INFORMATION:
TELEPHONE: (703) 836-6620
TELEFAX: (703) 836-2021

INFORMATION FOR SEQ ID NO: 3:
SEQUENCE CHARACTERISTICS:
LENGTH: 114 amino acids
TYPE: amino acid
STRANDEDNESS: single
TOPOLOGY: linear
MOLECULE TYPE: protein
US-08-259-000-3

Query Match 100.0%; Score 52; DB 1; Length 114;
Best Local Similarity 100.0%; Pred. No. 0.093;
Matches 10; Conservative 0; Mismatches 0; Indels 0; Gaps 0;

DB 8 SPEEDTEBDK 17

RESULT 11
US-08-459-135A-7
Sequence 7, Application US/08459135A
Patent No. 595078
GENERAL INFORMATION:
APPLICANT: BURNHAM, Martin Karl Russel
APPLICANT: CHOPRA, Ian
APPLICANT: CRITCHLEY, Ian Alfred
APPLICANT: KNOWLES, David Justin Charles
TITLE OF INVENTION: FIBRONECTIN BINDING PROTEIN: MONOCLONAL ANTIBODY AND THEIR US
NUMBER OF SEQUENCES: 15
CORRESPONDENCE ADDRESS:
ADDRESSEE: SmithKline Beecham Corporation
STREET: 709 Swedeland Road
CITY: King of Prussia
STATE: PA
COUNTRY: U.S.A.
ZIP: 19406-0939
COMPUTER READABLE FORM:
MEDIUM TYPE: Diskette
COMPUTER: IBM Compatible
OPERATING SYSTEM: DOS
SOFTWARE: Fastseq, Version 2.0
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/459,135A
FILING DATE: 02-JUN-1995
CLASSIFICATION: 435
PRIOR APPLICATION DATA:
APPLICATION NUMBER: PCT/GB/94/00215
FILING DATE: 04-Feb-1994
CLASSIFICATION: 435
ATTORNEY/AGENT INFORMATION:
NAME: Gimmil, Edward R
REGISTRATION NUMBER: 38,891
REFERENCE/DOCKET NUMBER: P30591C2
TELECOMMUNICATION INFORMATION:
TELEPHONE: 610-270-4478
TELEFAX: 610-270-5090
TELEX:
INFORMATION FOR SEQ ID NO: 7:
SEQUENCE CHARACTERISTICS:
LENGTH: 130 amino acids
TYPE: amino acid
TOPOLOGY: linear
MOLECULE TYPE: protein
US-08-459-135A-7

Query Match 100.0%; Score 52; DB 2; Length 130;
Best Local Similarity 100.0%; Pred. No. 0.11; Indels 0; Gaps 0;
Matches 10; Conservative 0; Mismatches 0; Indels 0; Gaps 0;
